Paul Howard, New England Fishery Management Council

Subject: Advance Meaningful Herring Fishery Reform

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Kira Goldsmith

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

If the herring go away, so will my life. I love to fish in the rivers and tide waters in New Jersey and I have noticed less catches as each year passes. Please do not ruin this wonderful fishery for my children and their children to come. Stop killing more than needed for the sake of a buck.

Micheal D. Hart

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Rusty Held

Paul Howard, New England Fishery Management Council

Subject: Advance Meaningful Herring Fishery Reform

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery—a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Paul Howard, New England Fishery Management Council

Subject: Advance Meaningful Herring Fishery Reform

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Rebecca tippens

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Laura Lynch

Paul Howard, New England Fishery Management Council

Subject: Advance Meaningful Herring Fishery Reform

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Subject: Advance Meaningful Herring Fishery Reform

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Keith Wolf

Mr. Patrick Neil

My personal comments

We need to build and manage our fishing stocks, and not in a capitalistic way but in long term business way. Nature produces more food than human beings ever have. We as human beings can help nature create a reasonable level of productive that can be harvested for providing food on the table, and not money in few capitalistic pockets. Greed of the few can kill nature for the rest of us.

--Christopher

Paul Howard, New England Fishery Management Council

Subject: Advance Meaningful Herring Fishery Reform

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Dr. Paul Ezust

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Jessie Bacon

Paul Howard, New England Fishery Management Council

Subject: Advance Meaningful Herring Fishery Reform

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
