

## Control Date to Limit Excessive Accumulation of Control, Qualifying Landings History, and Referendum Eligibility in the Small-Mesh Multispecies Fishery

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Advance notice of proposed rulemaking (ANPR); request for comments.

SUMMARY: At the request of the New England Fishery Management Council (Council), this notice announces a control date that may be applicable to, but not limited to, limits on the accumulation of excessive control or ownership of fishing privileges and qualifying landings history for an allocation-based management program in the small-mesh multispecies fishery. This notice is intended to promote awareness of possible rulemaking; provide notice to the public that any future accumulation of fishing privilege interests in the small-mesh multispecies fishery may be affected, restricted, or even nullified; and to discourage speculative behavior in the market for fishing privileges while the Council considers whether and how such limitations on accumulation of fishing privileges should be developed. Interested participants should locate and preserve records that substantiate and verify their ownership or control of small-mesh multispecies permits and other fishing privileges, as well as red, silver and offshore hake, collectively known as small-mesh multispecies, landings history in Federal waters.

DATES: [insert publication date], shall be known as the “control date” for the small-mesh multispecies fishery and may be used as a reference date for future management measures related to the maintenance of a fishery with characteristics consistent with the Council’s objectives and applicable Federal laws. Written comments must be received on or before 5 p.m., local time, [insert deadline for comments].

ADDRESSES: You may submit comments on this document, identified by “NOAA–NMFS–2012–[insert applicable document number],” by any of the following methods: •

- Electronic Submission: Submit all electronic public comments via the Federal e-Rulemaking Portal [www.regulations.gov](http://www.regulations.gov). To submit comments via the e-Rulemaking Portal, first click the “submit a comment” icon, then enter “NOAA–NMFS–2012–XXXX” in the keyword search. Locate the document you wish to comment on from the resulting list and click on the “Submit a Comment” icon on the right of that line. •
- Mail: Submit written comments to John Bullard, Regional Administrator, National Marine Fisheries Service, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope, “Comments on SMMS Limited Access and Accumulation Limits Control Date.” •
- Fax (978) 281–9135; Attn: Douglas Christel.

Instructions: Comments must be submitted by one of the above methods to ensure that the comments are received, documented, and considered by NMFS. Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered. All comments received are a part of the public record and will generally be posted for public viewing on [www.regulations.gov](http://www.regulations.gov) without change. All personal identifying information (e.g., name, address, etc.) submitted voluntarily by the sender will be publicly

accessible. Do not submit confidential business information, or otherwise sensitive or protected information. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word or Excel, WordPerfect, or Adobe PDF file formats only.

FOR FURTHER INFORMATION CONTACT: Douglas Christel, Fishery Policy Analyst, phone: 978-281-9141, fax: 978-281-9135.

SUPPLEMENTARY INFORMATION: The small-mesh multispecies fishery is composed of five stocks of three species of hakes (northern silver hake, southern silver hake, northern red hake, southern red hake, and offshore hake), and the fishery is managed primarily through a series of exemptions from the Northeast Multispecies FMP. The Council manages these fisheries through annual catch limits, in-season and post-season accountability measures, and possession limits. According to the most recent assessment, no small-mesh multispecies stocks are currently overfished, in danger of being overfished, and overfishing is not occurring. The Council sets limits to achieve maximum sustainable yield, which allows for positive impacts to human communities, yet measures (primarily possession limits) are included in the plan to prevent attracting excessive fishing effort. Despite this and the relatively stable recent catches, the potential remains for a rapid increase in effort and catch due to the open access management status.

Limited access alternatives for the small-mesh multispecies fishery were proposed during 2000 for incorporation in Amendment 12, using a September 9, 1996 control date. The Council established entry requirements based on historic participation in the small-mesh multispecies fishery, including factors such as amount of small-mesh multispecies landed and whether or not the vessel had obtained a multispecies permit on or before the previous control date of September 9, 1996. Future participation would have included catch restrictions based on a vessels' past involvement in the fishery. Although Amendment 12 was submitted for approval by the Secretary of Commerce, the limited access alternatives were disapproved by NMFS, due to the difficulty in implementation and the amount of controversy that surrounded this issue. The Council later updated the control date to March 23, 2003, intended for use as part of the basis for determination of potential limited access eligibility with a different set of eligibility criteria.

The Council is reconsidering limited access in the small-mesh multispecies fishery to address the potential for a rapid increase in fishing effort that could cause overfishing and destabilize markets. Limited access criteria may differ between the northern and southern stock areas due to fishery characteristics and stock participation. Historically, the northern stock area has seen greater activity surrounding small-mesh multispecies vessels and trips than the southern stock area. The alternatives may account for differences between the areas, focusing on preventing excessive fishing effort. Limited access alternatives may apply to any vessel landing one or more pounds of small-mesh multispecies, or only vessels targeting or landing larger amounts of small-mesh multispecies. The Council intends to develop one or more alternatives that will have thresholds determining if a vessel qualifies limited access. The Council may develop alternatives for sector management as well as for limited access. This may include determination of potential section contributions based on a qualifying vessel's history in the fishery.

The date of publication of this notification, [insert publication date], shall be known as the “control date” for the small-mesh multispecies fishery and may be used as a reference date for future management measures in determining how to treat fishing privileges or landings history acquired before this date and those acquired after this date, depending on the Council’s determinations on limiting control and ownership of such privileges and landings. The establishment of a control date, however, does not obligate the Council to use this control date or take any action, nor does it prevent the Council from picking another control date or imposing limits on permits acquired prior to the control date. Accordingly, this notification is intended to promote awareness that the Council may develop management measures to address these concerns, to provide notice to the public that any current or future accumulation of fishing privilege interests in the small-mesh multispecies fishery may be affected, restricted, or even nullified, and discourage speculative behavior in the market for fishing privileges while the Council considers whether and how such limitations on accumulation of fishing privileges should be developed. Any measures the Council considers may require changes to the Northeast Multispecies FMP. Such measures may be adopted in a future amendment to the FMP, which would include opportunity for further public participation and comment.

This notification also gives the public notice that interested participants should locate and preserve records that substantiate and verify their ownership or control of small-mesh multispecies permits and other fishing privileges in the small-mesh multispecies fishery, as well as small-mesh multispecies landings in Federal waters. Fishing privileges include, but are not limited to vessels, fishing permits, and any other type of catch limit or share.

This notification and control date do not impose any legal obligations, requirements, or expectation.
