1. Stock status as determined by GARM III, terminal year 2007; except for GB YTF (TRAC 2009, terminal year 2008), wolffish (DPWG 2009, terminal year 2008) and pollock (SAW/SARC 2010)
2. 2009 TTACs were set by NMFS in an interim action and F_{MSY} was used to set targets instead of $F_{REBUILD}$ for several stocks and instead. This made the TTACs higher than they should have been and makes it harder to tell if rebuilding objectives are being achieved by comparing catch to TTAC. Overall a higher percentage of TTACs was caught than in years past. This is due to lower TTACs as well as increased catches.
