Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Paul-Alexander Crystal

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. M. Dürrenberg

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring mid water trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and by catch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all mid water trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and by catch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring by catch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring mid water trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Dr. Ralph Garlin Clingan, PhD

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Dr. Wendy Palmquist

It is perverse to blame other animals for the decline of fish etc. when you watch what is called fishing today it is a disgrace. How long will this go on? why has noone enough courage to go against the lobbies and do soemthing.

We are destroying all fish very soon, many are already gone. Wake up, it is high time!!!!

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Bill Daniels

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Alison Schroeer

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Cathy Ruperti

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Omar Siddique

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. John Light

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Harold Cochran

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Craig Gatter

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Humberto Cintron

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Devin Henry

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Katie Corish

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Steven Tuttle

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Dolly Lee

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. alexandra white

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Margaret Alpert

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Anthony Tsang Yee

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Beverly Pollock

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Christine Kretzmer

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. LINDA hunt

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught & Killed

Dear Paul Howard, New England Fishery Management Council,

4 years ago the New England Fishery Management Council initiated a plan to improve catch monitoring & reduce bycatch in the Atlantic herring fishery. This provoked 10,000 public comments calling for action to reform the industrial herring midwater trawl fleet.

As an emeritus member of the American Institute of Biological Sciences (AIBS), I fear an 11th hour move to eliminate monitoring & bycatch reduction measures before the public is given a chance to comment. I ask you to ensure the Council approves for public comment the full range of management options developed in Amendment 5, including:

100% at-sea monitoring on all midwater trawl fishing trips (1 observer per vessel to sample all catch) to get accurate estimates of herring catch & bycatch of river herring, shad, groundfish, & all other nontarget species. No herring fishing in areas designated as river herring bycatch "hotspots", to protect river herring & the predators that depend on their coastal migrations. No herring midwater trawling in areas established to protect rebuilding groundfish populations. Prohibition of release or dumping of unsampled catch, except when there is mechanical failure or when safety is a concern. Consequences to discourage wasteful dumping of catch, including an accountability system to ensure exceptions are not abused (a fleetwide allowance of 10 dumping events for each herring management area, after which any dumping event would require a return to port).

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. sandy gilbert

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. shannon jacobs

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Unregulated and poorly regulated trawling has become a scourge of the world's fisheries. The world wide growth of trawling has produced totally unacceptable destruction of oceanic environment, including, but not limited to the problems of bycatch and its itinerant waste. Trawling must be more stringently regulated!

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Pete DeLorenzo

Mr. George Ripley

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Jennifer Gaegler

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Dr. Mark Follansbee

Mrs. Nina Greene

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Walter Comer

Miss Karen Bullis

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Michael Silver

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be a last minute attempt to eliminate key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Erin Reilley
