Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Teena Wildman

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Patricia Brendel

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. cathy loewenstein

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Clay Schoeffel

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. P. B. Jnr.

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Susan Wrightsman

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Debra Raymond

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Tiffany Mills

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Bill Martens

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Martha Lineberry

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Nancy Johnson

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Jeff Duneman

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Kevin Smith

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Jill Badyrka

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Thomas Corse

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. david rowan

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be a last minute move under industry pressure to maximise short term profits over long term viability and eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Patricia Bullock

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Miss Hannah Wiegard

Dear Paul Howard, New England Fishery Management Council,

It is past time to effectively manage our fisheries and implement scientific recommendations fully. Shortcutting to supposedly protect livelihoods does exactly the opposite. Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Michael Testa

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Holly Boudreau

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Dr. Lawrence Spatz

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Erica Mena-Landry

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery—a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Charles Struble

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

It is my understanding that around four years ago the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery. This prudent approach to maintaining a valuable and limited natural resource resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

I strongly support and applaud many of the reforms being proposed. But I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As completion of this plan approaches, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Bro John Mahoney

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Roger Bruneau

Bycatch is going to be the death of many forms of sealife. If it is not regulated and eventually stopped, we will be responsible for the death of the oceans. This is a good place to start.

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

It is obvious that the fish supply has been greatly depleted since the abundance of the 1960s, and I understand that peak fish occurred over 20 years ago. We cannot afford to be killing fish "accidentally"!

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery -- a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

PLEASE ENSURE the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Scott Butts

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Charles Gray

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Janel Galvanek

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Natasha Birdsey

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. KACIE DEAN
