Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Mary Zawoysky

Miss Monica Adams

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Robert Jones

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Katherine Rabenau

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. meg gilman

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. victor stamboulian

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Dr. Iván Zatz-Díaz

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mrs. nancy carrasco

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Anthony Kruegler

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mrs. Valerie Smith

Mr. Richard Riggs

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Marti Wheat

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Tim Lank

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

I grew up with Cape Cod fresh fish. They were fished much more responsibly than nowadays.

Sincerely,
Dr. Cynthia Ricard

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Jane Davis

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Margaret Loomis

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Sarah Dillner

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. mae basye

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Mitch Kihn

I have spent years studying this problem. Clupeid loss offshore is demersal loss inshore. Offshore seiners must be kept out of the hotspots permanently if you are to achieve a restored inshore ecosystem.

Sincerely,
Dr. William Leavenworth

Paul Howard, New England Fishery Management Council

Subject: Let's change the law so accidental catch doesn't occur!

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Judith Baldwin

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Becky Daiss

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mrs. emma neuendorf

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Cary Appenzeller

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Jon Levin

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Colleen Ausel

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. Erik Hoffner

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Ms. Ellen Atkinson

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Dr. Tyko Kihlstedt

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mrs. Anne Ansel

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mr. John Fritzen

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

**No herring midwater trawling in areas established to protect rebuilding groundfish populations.

**A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

**A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,
Mrs. Karen Slote

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

**100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

**No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.
