Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Michael Van Riper

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Michele Skeele

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. David Fowler

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Dr. priscilla Skerry

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

Also, as a native of Massachusetts, I understand the stress that fishing industry has endured. But, I also know that unless measures are taken, some of the most popular species will not be able to reproduce at a rate that keeps the balance of nature between fish hatched and fish caught. It is better to take these measures than to lose these precious resources.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery—a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. William Russell

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Jonathan Mariante

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Melissa Brandon

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Miss kim mirabella

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Nathan Rich

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Victor Spada

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

If they were catching mixed fish and making good use of all the fish they catch it wouldn't be so bad. If they were throwing some fish back and the fish being thrown back were going on about their business without any real harm done, it wouldn't be so bad. But with much of the catch going to waste, that is bad and is likely to make fish less available to consumers in the future.

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. SUSAN FISHER

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Richard Alloway

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Russell Se

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

The New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery. This resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

Many of the reforms proposed make sense. However, I am afraid there might be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

PLEASE ensure that the Council continues to support meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Sue D'Onofrio

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Linda Berger

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Dr. Keith Allen

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery. As we near completion of this plan, please ensure the Council continues to demonstrate their commitment to and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Gabriel Alfieri

Paul Howard, New England Fishery Management Council

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Sharon Burtner

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Ronald Fleming

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Wendy Beyda

Paul Howard, New England Fishery Management Council

Subject: Please Take Action to Reduce Bycatch!

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet. Improved management of this fishery will also benefit fishermen in my home region the Mid-Atlantic.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

I strongly urge you to finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery. Thank you for your time and consideration.

Sincerely,  
Miss Sarah Peters

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Loren Riegelhaupt

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Carolyn Ormenaj

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. Andrew Politzer

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. thanice petrak

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Vickie Penninger

Paul Howard, New England Fishery Management Council

Subject: Restore River Herring by Controlling Off Shore Fisheries

Dear Paul Howard, New England Fishery Management Council,

I have been concerned about the state of American shad and other river herring in the Hudson River and elsewhere for some time, and I want you to do everything in your power to restore the Hudson's herring runs to historic levels. For that reason, I support Pew and others in their attempts to argue for measures necessary for restoration.

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery—a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

Subject: Accidentally Caught and Killed

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. suzanne dolwick

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mr. I Benedict

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Mrs. Joan Conca

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. April Plumeri

Dear Paul Howard, New England Fishery Management Council,

Almost four years ago, the New England Fishery Management Council initiated a plan to improve catch monitoring and reduce bycatch in the Atlantic herring fishery a move that resulted in nearly 10,000 public comments calling for effective action to reform the industrial herring midwater trawl fleet.

While I heartily support and applaud many of the reforms being proposed, I am concerned there could be an eleventh hour move to eliminate some key monitoring and bycatch reduction measures before the public is given the opportunity to comment.

As we near completion of this plan, please ensure the Council continues to demonstrate their commitment and support of meaningful reform of the Atlantic herring fishery by approving for public comment the full range of management options developed in Amendment 5, including:

\*\*100 percent at-sea monitoring on all midwater trawl fishing trips (i.e., one observer per vessel to sample all catch) in order to provide reliable estimates of herring catch and bycatch of river herring, shad, groundfish and other non-target species.

\*\*No herring fishing in areas designated as river herring bycatch "hotspots" to protect river herring and the predators that depend on their coastal migrations.

\*\*No herring midwater trawling in areas established to protect rebuilding groundfish populations.

\*\*A prohibition on the release or dumping of unsampled catch except under exceptional circumstances, such as mechanical failure or when safety is a concern.

\*\*A set of consequences to discourage the wasteful dumping of catch, including an accountability system to ensure the exceptions are not abused (a fleetwide allowance of ten dumping events for each herring management area, after which any dumping event would require a return to port).

Thank you for your consideration of my comments as you finalize these much-needed and long-awaited reforms to the industrialized Atlantic herring fishery.

Sincerely,  
Ms. Rosemary Lerario
