New England Fishery Management Council

50 WATER STREET | NEWBURYPORT, MASSACHUSETTS 01950 | PHONE 978 465 0492 | FAX 978 465 3116
E.F. "Terry" Stockwell III, *Chairman* | Thomas A. Nies, *Executive Director*

MEMORANDUM

DATE: November 15, 2013
TO: Council
FROM: Tom Nies, Executive Director
SUBJECT: **2014 Management Priorities**

1. The attached documents are provided to help the Council determine 2014 Council priorities.
 - a. The first attachment lists all possible tasks that have been identified. Tasks are listed by FMP, with tasks that are expected to be completed by the end of the year in the first column and multi-year tasks in the second column. Committee recommendations (if available) are identified with a checkmark. Executive Committee recommendations are also marked with a checkmark. Tasks that are not recommended by the Executive Committee recommend are also in italics. This list includes major staff tasks that are expected.
 - b. The tasks are sorted into two columns, annual and multi-year. While the Executive Committee will further discuss the priority-setting process in 2014, the expectation is that identified multi-year tasks will be pursued until completed.
 - c. The second attachment groups tasks into likely management actions. This is intended to show how each task could be addressed by the Council and its plan development teams. This is only an illustration; the Council may later decide on different groupings.
 - d. Staff reassignments may be considered once the Council priorities are identified. I do not anticipate changing any plan coordinators this year.
2. While there will be discussion on each of the possible tasks, some of the more difficult issues are discussed below.

Groundfish

3. The Groundfish Committee expressed an interest in exploring alternative catch setting approaches, a topic that will probably take more than a year to complete and that will need significant support from the NEFSC. Should this be pursued the Council will need to recognize that the ability for staff to respond to short-notice tasks will be very limited. The Executive

Committee did not adopt all of the Groundfish Committee recommendations in order to reduce the Council and staff workload so that adequate time was available to address this issue.

4. Recent developments on the trading of quota between the U.S. and Canada led the Executive Committee to question whether it is worthwhile to pursue a trading mechanism amendment. Further discussion on this issue is likely to occur at the Groundfish Committee meeting on November 18 and 19.

5. The Executive Committee also does not recommend actively pursuing cod stock structure issues this year. While it is listed as a priority, it would be pursued as time permits. Discussions will continue with the NEFSC on how this might be advanced.

Scallops

6. The Executive Committee recommendations were prepared before the Scallop Committee met to discuss priorities. One of the scallop issues is closely linked to the Omnibus Habitat Amendment 2 (OHA 2); see the discussion that follows.

Herring

7. One of the issues with respect to herring priorities relates to the industry-funded monitoring provisions that were proposed in Amendment 5 but not approved. NERO has offered to take the lead on an omnibus amendment that would create a mechanism for industry-funded observers across all fisheries, and suggested addressing the herring Amendment 5 industry-funded observer issues in this same action. The Executive Committee supports this approach but recommends the Council may want to discuss this issue.

8. After the Executive Committee meeting correspondence was received suggesting an additional herring priority: to lift the Management Area 1A closure from January through April, this suggestion was considered by the Herring Committee but not recommended.

Omnibus Habitat Amendment 2 (OHA2)/Scallop Management Actions

9. In part due to additional delays caused by the federal shutdown, the Council will not be able to make final decisions on OHA2 until the June 2014 Council meeting. This pushes back the likely implementation date of OHA2 measures to February 2015, at the earliest. This timeline assumes a smooth submission and review of the amendment. There has long been an interest within the scallop industry to access any areas that may be opened as a result of OHA2 as quickly as possible during FY 2014. Given the late implementation date of OHA2 that does not seem probable – at best any new areas could be open only three weeks of the fishing year.

10. It will not be possible for meaningful work on new scallop access areas to begin before the end of June, 2014. Several key scallop PDT members will be working on the scallop assessment and the scallop survey review through June 2014. The assessment results could affect future scallop specifications. The target ACT for scallops is also dependent on the areas that are open to scallop fishing.

11. Ideally, the opening of any new areas to mobile gear as a result of OHA2 should be closely coordinated with the scallop FMP so that newly designed scallop access areas are implemented at the same time as any new habitat management areas. It would be difficult for the scallop PDT to design revised scallop access area management measures until the new habitat management areas are known. To avoid misdirected use of staff resources these areas should be developed after NERO has made a final determination on the OHA2 proposed areas, but this would push back implementation of any new scallop access areas to fall 2015. The Executive Committee recommends an alternative approach that would start development of new access areas once the Council selects a proposed action for OHA2. These new areas would then be adopted through the same framework that sets the FY 2015 specifications. New access areas would be implemented in early summer, 2015 (May or June).

12. As part of this discussion it may also make sense to consider implementing the OHA2 measures and the revised scallop access areas at the same time (roughly May 2015). While this is not strictly a priorities issue it might influence the Council's priority decisions. In any case, the OHA2 document should clearly state how changes to habitat areas will be implemented. Staff will remind the Council of this recommendation when the draft document is approved in December.

Monitoring/ Electronic Monitoring (EM)

13. On attachment (1) I've highlighted in yellow several tasks that address fishery dependent monitoring issues, including EM. The two main FMP-specific issues include facilitating EM for groundfish sectors (a groundfish-specific project begun in 2013), and addressing industry-funded at-sea monitoring issues for the groundfish and herring fisheries (relevant measures in groundfish FW 48 and herring A5 were disapproved). NERO already proposed an omnibus amendment to address industry-funded at-sea monitoring issues and suggested including the herring measures in that document. In a related effort, NERO and the NEFSC have initiated a broad-based effort to improve fishery dependent data collection. There are also several EM initiatives that are taking place at the regional and national levels.

14. The Executive Committee discussed whether it would be more efficient to combine the Council's efforts on these tasks; doing so may slow the adoption of EM or other monitoring changes within specific FMPs (such as EM for groundfish sectors in FY 2014). If the efforts are not combined or coordinated, though, the result may be a fragmented approach.

Whiting

15. Whiting specifications must be identified for FY 2015 and beyond. The whiting fishery will probably be interested in revisiting the small-mesh fishery GB yellowtail flounder AM that will be adopted by FW 51. There has long been an interest in implementing a limited access program in the whiting fishery, an effort that has been started and stalled several times. The Council should commit to this effort, which may take more than one year to complete.

EBFM

16. The Executive Committee discussed providing initial guidance to this Committee on how to proceed if EBFM is adopted as a Council priority. Initial efforts of the Committee should address

coordination of EBFM with the MAFMC and the ASMFC. The Chair has identified two seats for the MAFMC on the EBFM Committee, and appointed two state directors to facilitate coordination.

Timing

17. Council members should recognize that progress will not be simultaneous on all of the identified tasks. For example, progress on EBFM and whiting actions will be slow until the draft OHA 2 document is submitted; the coral amendment will not be pursued until that action is completed; new groundfish actions will not be pursued until FW 51 is submitted. In addition, required regulatory tasks may take precedence over multi-year tasks.

MEMORANDUM

DATE: November 1, 2013
TO: Executive Committee
FROM: Tom Nies
SUBJECT: 2014 Management Priorities

1. The attached documents are provided to help develop Executive Committee recommendations for the 2014 Council priorities.

a. The first attachment lists all possible tasks that have been identified. Tasks are listed by FMP, with tasks that are expected to be completed by the end of the year in the first column and multi-year tasks in the second column. Committee recommendations (if available) are identified with a checkmark and my advice for Executive Committee recommendations are marked with the letter "D" (for draft). Tasks that I do not recommend are also in italics. This list includes major staff tasks that are expected.

b. The second attachment groups tasks into likely management actions. This is intended to show how each task could be addressed by the Council and its plan development teams. This is an illustration; the Council may later decide on different groupings.

c. Staff reassignments may be considered once the Council priorities are identified. I do not anticipate changing any plan coordinators this year.

2. While there will be discussion on each of the possible tasks, some of the more difficult issues are discussed below.

Groundfish

3. The Groundfish Committee expressed an interest in exploring alternative catch setting approaches, a topic that will probably take more than a year to complete and that will need significant support from the NEFSC. Should this be pursued the Council will need to recognize that the ability for staff to respond to short-notice tasks will be very limited. The Executive Committee may want to consider paring down the tasks that have been identified.

Omnibus Habitat Amendment 2 (OHA2)/Scallop Management Actions

4. In part due to additional delays caused by the federal shutdown, the Council will not be able to make final decisions on OHA2 until the June 2014 Council meeting. This pushes back the likely implementation date of OHA2 measures to February 2015, at the earliest. This timeline assumes a smooth submission and review of the amendment. There has long been an interest within the scallop industry to access any areas that may be opened as a result of OHA2 as quickly as possible during FY 2014. Given the late implementation date of OHA2 that does not seem probable – at best any new areas could be open only three weeks of the fishing year.

5. It will not be possible for meaningful work on new scallop access areas to begin before the end of June, 2014. Several key scallop PDT members will be working on the scallop assessment and the scallop survey review through June 2014. The assessment results could affect future scallop specifications. The target ACT for scallops is also dependent on the areas that are open to scallop fishing.

6. Ideally, the opening of any new areas to mobile gear as a result of OHA2 should be closely coordinated with the scallop FMP so that newly designed scallop access areas are implemented at the same time as any new habitat management areas. It would be difficult for the scallop PDT to design revised scallop access area management measures until the new habitat management areas are known. To avoid misdirected use of staff resources these areas should be developed after NERO has made a final determination on the OHA2 proposed areas, but this would push back implementation of any new scallop access areas to fall 2015. An alternative approach would start development of new access areas once the Council selects a proposed action for OHA2. These new areas would then be adopted through the same framework that sets the FY 2015 specifications. New access areas would be implemented in early summer, 2015 (May or June).

7. The Executive Committee should discuss whether it would be advantageous to have revised scallop access areas addressed in the 2015 specifications action rather than a separate framework action that would be initiated before the Council's OHA2 decisions were final. As part of this discussion it may also make sense to consider implementing the OHA2 measures and the revised scallop access areas at the same time (roughly May 2015). While this is not strictly a priorities issue it might influence the Council's priority decisions.

Monitoring/ Electronic Monitoring (EM)

8. On attachment (1) I've highlighted in yellow several tasks that address fishery dependent monitoring issues, including EM. The two main FMP-specific issues include facilitating EM for groundfish sectors (a groundfish-specific project begun in 2013), and addressing industry-funded at-sea monitoring issues for the groundfish and herring fisheries (relevant measures in groundfish FW 48 and herring A5 were disapproved). NERO already proposed an omnibus amendment to address industry-funded at-sea monitoring issues and suggested including the herring measures in that document. In a related effort, NERO and the NEFSC have initiated a broad-based effort to improve fishery dependent data collection. There are also several EM initiatives that are taking place at the regional and national levels.

9. The Executive Committee may want to discuss whether it would be more efficient to combine the Council's efforts on these tasks; doing so may slow the adoption of EM or other monitoring

changes within specific FMPs (such as EM for groundfish sectors in FY 2014). If the efforts are not combined or coordinated, though, the result may be a fragmented approach.

Whiting

10. Whiting specifications must be identified for FY 2015 and beyond. The whiting fishery will probably be interested in revisiting the small-mesh fishery GB yellowtail flounder AM that will be adopted by FW 51. There has long been an interest in implementing a limited access program in the whiting fishery, an effort that has been started and stalled several times. The Council should commit to this effort, which may take more than one year to complete.

EBFM

11. As mentioned in my earlier memo to the Executive Committee my recommendation is that any Council effort to pursue EBFM should be coordinated with the MAFMC and the ASMFC. The Chair has identified two seats for the MAFMC on the EBFM Committee. The Executive Committee may want to discuss providing initial guidance to this Committee on how to proceed if EBFM is adopted as a Council priority.

MEMORANDUM

DATE: September 20, 2013
TO: Council
FROM: Tom Nies
SUBJECT: 2014 Council Priorities

1. Council priorities for 2014 will be introduced at the September Council meeting, with the decisions taking place at the November meeting. The attached documents summarize the status of the approved 2013 priorities and list potential items for 2014 (enclosures 1 through 3). This memo updates information provided to the Executive Committee in a memo dated August 26, 2013. The Groundfish, Scallop, Herring, and Skate Committees met after the Executive Committee meeting and the list has been updated to include priorities identified by the Committees. The major changes reflected in the attachments are:

- The Groundfish Committee identified several additional possible priorities that have been added to the list.
- Skate priorities have been adjusted to include the requirement to end overfishing on thorny and winter skates.
- A possible omnibus amendment to address industry-funded monitoring issues was added based on a presentation that will be delivered at the Council meeting.
- The Executive Committee added a review of the priority setting process to address issues raised in my August 26, 2013 letter.
- Several additional staff responsibilities have been added.

2. Even a cursory review of the attached list indicates that the possible tasks exceed our resources. There are several possible priorities (EBFM, alternative groundfish catch setting strategies, industry-funded monitoring amendment) that will take an extended effort and should the Council pursue these priorities it should recognize this will reduce the short-term issues that can be addressed.

3. The Executive Committee has not yet identified a strawman priorities list. Some Committees (Herring, Groundfish) have recommended which tasks to pursue; these decisions have not yet been incorporated into these lists.

Enclosures:

- (1) Status of 2013 priorities
- (2) 2014 Draft Priority Tasks
- (3) 2014 Overview

MEMORANDUM

DATE: August 26, 2013
TO: Executive Committee
FROM: Tom Nies
SUBJECT: 2014 Council Priorities

1. Council priorities for 2014 will be introduced at the September Council meeting, with the decisions taking place at the November meeting. The attached documents summarize the status of the approved 2013 priorities and list potential items for 2014 (enclosures 1 through 3). Several Committees have yet to discuss next year's priorities, so this list will probably change after the input is received. While the Executive Committee may not want to develop recommendations until all of the Committee input is received, some discussion may help identify issues that need more attention before the September meeting. I am still working on the best way to present this information to the Council.

2. One issue that may benefit from Executive Committee and Council discussion is the approach to Ecosystem-Based Fishery Management. For the 2012 priorities a three-phased approach was identified that would move the Council to three FMPs, one for each of three Ecosystem Production Units (EPUs). Work on Phase I of this approach was started in 2012 but postponed in early spring of that year. It is not clear that this approach is consistent with that planned by the MAFMC or ASMFC, and there may be a need to coordinate an EBFM approach with the other regulatory bodies in the region.

3. The Council's approach to priorities has been as an annual exercise. This tends to focus attention on immediate, short-term issues at the expense of a strategic approach. I recommend that during 2014 the Executive Committee consider development of a new approach to priorities that takes a longer view. Some ideas that could be explored include:

- Develop the Council's mid-term (i.e. 2-3 year) goals and give precedence to Committee priorities that advance those objectives. This is not another visioning project; rather, it would identify concepts the Council believes need to be pursued to improve management in the long-term.
- Ask Committees to plan activities for two years, with the understanding the second year is tentative and subject to change.
- Specifically identify multi-year actions when first adopted and require a 2/3 vote to stop work on that priority in a subsequent year.
- Require a 2/3 Council vote to add or remove a priority mid-year, or to significantly alter an existing action. This would require some thought to develop guidelines on the type of changes needed to trigger this requirement.

GROUND FISH PRIORITIES

NORTHEAST SEAFOOD COALITION

October 31, 2013

Terry Stockwell, Chairman
New England Fishery Management Council
50 Water Street, Mill 2
Newburyport, MA 01950

Dear Terry:

Our members deeply appreciate all of the initiatives the Council has advanced over the past year to mitigate the ongoing economic disaster affecting the groundfish fishery. Regrettably, many of these initiatives have been rejected or rendered ineffective by NMFS. Consequently, the intensity and immediacy of this disaster has only increased over the course of this fishing year.

With this in mind, it is our view that the Council should adopt a set of groundfish management priorities for 2014 that are strictly limited to those which will serve to mitigate the immediate economic impacts of the disaster declared by the Secretary of Commerce in September 2012. In our view, this would include, among other priorities, the development of alternative management strategies such as those described in our letter to you dated August 30, 2013 (see enclosure).

Our comments should not be misconstrued to imply NSC recommends the Council set aside conservation measures designed to prevent or end overfishing as we continue to comply with the ACL and AM requirements of the Magnuson Act. NSC continues to support management that limits fishing to sustainable levels. However, this is not the time to close areas that have never been closed or to pretend that we can socially engineer a fishery that is in economic collapse as a result of ACL reductions. This is a time when long term goals should be deferred and our collective resources and priorities should be focused on stabilizing the current disaster.

In our view, actions that are appropriate for postponement would include, among others, the juvenile habitat and spawning area closures under development by the Council for the Omnibus Essential Fish Habitat Amendment 2. As noted in NSC's letter to the Council dated September 3, 2013 (see enclosure), these measures under development have not only been offered late in the process, but also propose additional economic hardships on already struggling fleet. In fact, the Bigelow Bight and Northern Edge alternatives emerging from the juvenile habitat and spawning area closures under development may well undermine those actions already taken by the Council that do provide such mitigation. In contrast, there may be elements of the Omnibus Habitat Amendment that would serve to mitigate the disaster and should be included among the Council's 2014 priorities.

Once again, the net result of groundfish management over the course of this year has not improved the likelihood of survival for our groundfish fishery and the situation continues to deteriorate. We believe the Council can turn this around in 2014, provided its priorities are properly defined and its limited resources for groundfish management are fully applied to mitigate the immediate economic impacts of this disaster.

Thank you for your consideration and leadership,

Jackie Odell
Executive Director

Newburyport, MA 01950

Re: New England Fishery Management Council Priorities

Dear Terry:

On behalf of our members whose businesses rely upon a sustainable and stable groundfish fishery, the NSC strongly requests that the Groundfish Oversight Committee recommend to the New England Fishery Management Council for inclusion in the Council's future priorities that alternative management approaches for setting catch advice be explored, analyzed and considered for stocks managed under the groundfish fishery management plan. Such strategies should be considered as an alternative for managers who have relied solely upon the existing stock assessment models which, for many stocks, have proven over the past ten years to yield wildly fluctuating if not unreliable results. This has rendered both the business and management of the groundfish fishery virtually impossible.

NSC strongly believes that the time for exploring alternative management approaches is now. The groundfish fishery, which is now only four months away from the original 2014 rebuilding targets, is already in a state of disaster.

NSC looks forward to working with your Committee and the Council on this important endeavor to achieve sustainability and stability in the groundfish fishery.

Thank you in advance for your consideration.

Sincerely,

Jackie Odell
Executive Director

Newburyport, MA 01950

Dear Dave and Terry:

On behalf of our members, the Northeast Seafood Coalition (NSC) has actively participated in the New England Fishery Management Council (Council) process surrounding the Habitat Omnibus Amendment for several years. The NSC has actively worked with other industry organizations and stakeholders to redesign options to achieve habitat goals without creating adverse and largely unnecessary economic impacts on an already fragile groundfish fishing fleet. Aside from the newly designed options proposed by the Closed Area Technical Team (CATT), many of the options in the document today are based upon extensive discussions and considerable time invested by a diverse group of stakeholders who have a keen interest in making this management action successful.

While the Habitat Omnibus Amendment has been under development over the past five years, the NSC has held focus meetings with various segments of our membership and others. Generally, these meetings were designed to accomplish two primary goals. The first was to provide members with an updated version of alternatives for respective areas, which were plotted by NSC on true nautical charts that would be familiar and useful to fishermen. The second was to seek their area-specific expertise in order to consider potential impacts to fishing and to help NSC leadership by providing us with plausible compromises as the Amendment developed. These meetings often involved non-NSC members and at times, non-fishing stakeholders. These meetings largely centered on habitat areas that pre-dated the alternatives put forth by the CATT, which have only appeared in recent months.

NSC members who operate out of the Northeast Fishery Sectors have limited context on the most recent work of the CATT and how options developed by the CATT are now folded into alternatives under consideration in the Amendment. Therefore, over the summer NSC convened an internal working group, which is comprised of members of the NSC Board of Directors, the Northeast Sector Service Network, Northeast Fishery Sectors, and NSC general membership to review the alternatives approved by the Council at the June meeting held in Portland, Maine. *This internal process has been important because the CATT work has largely negated efforts put forth over the years to recommend modifications to alternatives already under consideration.*

62 HASSEY STREET, NEW BEDFORD, MA 02740
TEL: 978.283.9992 | FAX: 978.283.9959
NORTHEASTSEAFOODCOALITION.ORG

Per the Council's request, please find preliminary input of the NSC working group to alternatives under development by the Council's technical teams below.

General Comments:

- *Any habitat area considered for protecting spawning or juvenile fish should be developed for a future management action. First, the CATT work has appeared very late in the Amendment process. There has been inadequate time for stakeholders to participate and react to these alternatives that will impose great hardships for many fishing businesses. Second, there is serious concern with the scientific information and data being used to identify and justify such areas. Third, in many cases, the alternatives put forth by the CATT conflict with the efforts of stakeholders over the years to work closely together to craft thoughtful alternatives in the Amendment.*
- NEFMC staff should distinguish comments received during the Habitat Informational Meetings, as well as future comments received by placing comments into categories for the benefit of the Council and its committees. Comments should be differentiated depending on whether a comment is put forth by an individual member of a harvesting sector or if a comment has been submitted by an industry organization on behalf of numerous fishing stakeholders. Comments received from membership organizations should be presented to the Council in a manner that reflects the proportion of active industry participants on whose behalf the comments were submitted. The NSC working group also suggests comments should be weighted based on fishing area of the commenter. Specifically, the comments should be organized in a manner that allows the Council to determine whether an individual or organization's members have experience with or actively fish in a given area for which comments have been provided. For example, if a comment submitted by a Southern New England fisherman or group suggests an area closure in the western GOM, it should not have the same weight as a comment submitted by from a fishermen or group who actively fish in the western GOM. These may reflect two very different perspectives and the basis for these differences are important for the Council to understand. The same holds true for eastern GOM and western GOM, western GB and eastern GB etc. This context is critical to the Council's fair evaluation of the comments received.
- Existing and future spawning and seasonal closures should be closed to all gear capable of catching groundfish. For instance, disallowing commercial fishing for the purpose of protecting groundfish, promoting rebuilding and spawning while simultaneously allowing open access to these areas by the recreational fishery, which has been allocated 34% and 38% of Gulf of Maine haddock and cod stocks respectively, is wrong.
- Over the years, juvenile protection has been managed through restrictions on mesh size. Therefore, knowing exactly when and where a juvenile fish are located in a respective area will be difficult for those whose gear has been regulated by mesh size.
- The scientific data being used to identify and justify the habitat areas proposed by the CATT is highly questionable. Many believe it has not been scientifically proven that there is a valid correlation between juvenile fish and habitat types. Many also question why more consideration has not been given to the apparent correlation between the absence of mobile gear in vast areas of GOM and GB over the last two decades and the loss of groundfish productivity.

- Juvenile fish frequent waters that are less than 20 fathoms, most of which is located within state waters.
- The foot print of fishing has been significantly reduced in recent years as effort and participation in the fishery has dwindled. The significant reductions in ACL will further reduce the foot print of the groundfish fleet. The reality of this shifting baseline should be quantified and reflected each time there is a qualitative description of the proposed habitat closures and impacts. For example, if swept area and effort has shrunk to 20% of historical effort that was occurring when the existing closures went into place, this should be stated whenever a discussion about reducing the overall acreage of closures is touted. ACLs will further reduce the foot print of the groundfish fleet.
- There appears to be a conflict with Council policy on different management actions. Groundfish sectors and catch shares adopted under Amendment 16 were proclaimed to increase efficiency and thus foster economic profitability. The initial direction of the Habitat Amendment was to develop focused habitat areas, and to protect habitat on a finer scale. The newly proposed areas by the CATT are large and expansive areas, which will impose devastating economic hardships on the fleet - notably the day boat fleet. This appears to be in direct conflict with the purpose and overall intent of groundfish Sectors under Amendment 16 and will be contrary to objectives being set forth under Amendment 18.

Responses to Questions Raised by the Council under the Habitat / Groundfish Informational Interviews:

- (1) In general, per spawning, support small focused areas to protect spawning. These areas should be discrete and dynamic, not static, due to the unpredictability of timing and precise area to ensure real protection. Such areas should be based on science and monitored closely. The areas should be identified with the assistance of cooperative research and actual spawning activity should be verified. The goal of spawning areas should be to enhance the reproductive success of the fish while being the least disruptive and costly to the fishery. Early versions of NEF sector operations plans proposed exemptions that utilized sentinel vessels and dynamic temporary closure concepts. These exemptions were denied but the NSC believes this concept should be reconsidered and developed. In general, the sector tool needs to be used to provide benefits to fishermen and fishery management equally. So far, there has been much more extracted from sectors by NMFS to improve reporting frequency and compliance, data quality and real time hard TAC management and very little reciprocal benefits as were touted during the development of A16. The conversion to an output control management system was intended to remove the need for input control measures—not to layer one upon the other. Broadening, not narrowing, of access to historical fishing grounds was a fundamental feature that was to accompany sector management.
- (2) It is difficult for the industry to understand what the economic impacts will be of the alternatives when it is still unclear which existing habitat areas will or will not be opened. Furthermore, economic impacts dependent greatly on the size and range of the fishing vessel. Overall, it is clear fishermen and their respective Sectors will be heavily impacted. Especially,

those that are trapped by the options currently proposed under Bigelow Bight. Closures have huge impacts on the human response and closures have significant economic and social consequences. The NSC will work with its members to provide the Council with a more detailed description of the magnitude of the impacts from the Bigelow Bight alternatives.

- (3) Catch Shares were marketed to fishermen as an opportunity to fish efficiently. Options now being included via the Habitat Amendment are instead focused on decreasing efficiency. This is particularly notable in areas such as Georges Shoals where the largest portion of a healthy stock, Georges Bank winter flounder, are harvested. Although members support gear modifications over a closure, other elements such as the potential for lost yield of stocks needs to be weighted heavily in final decisions.
- (4) All fisheries should have adequate monitoring. This information could then be used to determine the timing and location of spawning. Furthermore, sentinel fisheries (as proposed as a Sector exemption) with a cooperative research or monitoring component could be used to determine spawning activity. We need to stop relying on NMFS trawl survey data to determine spawning events and habitat.
- (5) Furthermore, industry members question the literature review on habitat protection and fishery productivity. There is a need for focused and directed cooperative research projects that objectively evaluate gear impacts on habitat and thus future productivity of groundfish stocks. Such research could also be used to identify time periods and areas that could be temporarily closed. Any area closed should have a research, monitoring and performance plan to evaluate its effectiveness. It is essential to closely monitor and evaluate if the closure is achieving its intended purpose.

Initial Input on Habitat Alternatives under Development:

Although there is general confusion over the type and level of gear restrictions that are being considered for the areas being identified, this input is intended to provide the Council with an initial reaction to the areas being considered. The NSC working group will be meeting in the coming weeks to further discuss the alternatives as outlined in the Habitat Omnibus Amendment in more depth.

Gulf of Maine:

Eastern GOM

- NSC members do not fish in most of the habitat areas identified under Eastern GOM. Therefore, NSC wishes to defer comments to those fishermen who fish these waters.

Central GOM

- Preferred habitat option is Ammen Rock / Cashes Ledge modified EFH, Alternative 4.

Western GOM

- Preferred habitat option is Stellwagen "large" which is shown *as part* of Alternative 3. This area is based upon industry support for the work surrounding the development of SERA 2. However, the group does not support the inclusion of Bigelow Bight "large" under this alternative for the numerous reasons mentioned throughout this document. In short, the group supports Stellwagen "large" as the only closure in the Western GOM.
- Bigelow Bight options (as proposed by the CATT) whether large or small needs to be removed from this action in order to have adequate review and consideration. The economic impacts associated with these newly designed options are profound. When combined with other areas either existing or under consideration in the Western GOM, there would be no area left for the day boat fishery to fish. Furthermore, the Bigelow Bight area is where the greatest number of trips by the day boat fleet occurs. This area has the highest economic return for this portion of the fleet. Lastly, industry members questioned whether these areas have been identified adequately (on good data). Most spawning likely occurs in state waters.

Georges Bank, Great South Channel, and Southern New England:

Georges Bank

- Preferred habitat option is the Georges Shoal Habitat Management Area (HMA / MBTG). This includes support for Alternative 5 with the Georges Shoal Gear Modification Area "large" being replaced with the Georges Shoal Area "small" as a potential gear modification area.

Great South Channel

- Support the habitat area identified as "Nantucket Shoals" included under Alternative 5.

We greatly appreciate your time and attention. We look forward to providing more detailed input on the alternatives under development in the coming days.

Sincerely,

Jackie Odell
Executive Director

Proposal for an NEFMC priority on alternative catch strategies:

Investigate alternative management procedures for setting groundfish ABCs that:

1. are aimed at achieving optimum yield,
2. strive to limit year to year changes in catch to the extent practicable,
3. are suitable in situations where model uncertainty, parameter uncertainty, and retrospective patterns hinder status determinations and estimation of OFL, and significantly contribute to instability in catch advice,
4. Ameliorate uncertainty associated with infrequent assessment updates and/or make more frequent updates practical.

The investigation should be planned by an ad hoc group with representatives of the Council, SSC, and the PDT.

- Dr. Michael Sissenwine

SCALLOP PRIORITIES

One additional correspondence came was received on November 12, 2013, after the meeting package was prepared for the Scallop Committee Meeting.

Rep. William Keating sent a letter related to the potential modification of the small dredge exemption program.

That correspondence has been included at the very back of the correspondence related to scallop priorities.

1a

Mary Beth Tooley, Chair
Scallop Committee
New England Fishery Management Council
50 Water Street, Mill 2
Newburyport, MA 01950

11/8/20

Dear Chairwoman Tooley,

We are writing today to ask that a recommendation come from the Scallop Committee to have a correction to current Northern Gulf of Maine (NGOM) scallop management inconsistencies be on the list of priorities for the next year of council work. We are making this request because we believe that a simple fix to the Northern Gulf of Maine management area will close a regulatory oversight that needs to be addressed for scallops to fully recover in the Gulf of Maine.

As Northern Gulf of Maine scallop permit holders there has been very little reason for us to be involved in federal scallop management over the years. Maine scallops are mostly harvested in state waters and a lot of effort has been spent to develop a management system to rebuild those stocks and create a strong inshore fishery. Despite not having participated in the federal fishery in many years, many Maine fishermen have held on to or purchased NGOM scallop permits because we believe the resource in the NGOM will recover, and we believe that with careful management, that recovery could create sustainable profits for fishing communities in dire need of them.

Scallops are one of the few bright spots for New England fishermen as we have seen the groundfish industry declared an economic disaster, the northern shrimp fishery basically shut down, and lobster prices greatly declined since the economic collapse a few years ago. The value of scallops has continued to increase but most of that value is found south of Cape Cod. We hope that through careful management Maine fishermen will be able to access this federal fishery in the future through the Northern Gulf of Maine permits that many of us have been holding on to for years without having the opportunity to use them.

Thank you for your time and consideration of this matter. With the little effort that currently exists in the Northern Gulf of Maine, now is the time to address this issue instead of waiting until it is too late. The simple solution of requiring all boats fishing in this area to adhere to the same NGOM regulations will protect the resource and provide an opportunity for an industry that is badly in need of one. We hope that the Scallop Committee asks the full Council to consider making addressing this issue a priority over the next fishing year.

Sincerely,

James Wotton, F/V Overkill, Friendship, Maine.
Alex Todd, F/V Jacob and Joshua, Chebeague Island, Maine
Walt Jessiman, F/V Dreamcatcher, Cutler, Maine
Kristan Porter, F/V Brandon Jay, Cutler, Maine

Subject: Re: NGOM scallop comments

I am writing this note to you in hopes that you will share my concerns for the inequities that currently exist in the NGOM management area with the Scallop Advisory Council and Scallop Committee. These inequities start with arbitrary use of a TAC that is only leveraged by participation of one user group (NGOM permit holders), while another group can exploit the resource however they see fit is unconscionable in todays era of fishery management. On top of this the group that stands to benefit the most under current regulations has by far the least amount of historical participation in this management area. I know this because I participated in this fishery as did many other small Maine based boats over thirty years ago that at times thrived all along the coast of Maine. I look at this as being tied to a lot of the issues surrounding fleet diversity which are being considered in the ground fish arena right now. There is however one major difference as the trends in the ground fish industry will be much more complicated then what faces the NGOM management area right now. It is time to do the right thing not only for the resource but also for the people and coastal communities that have historically depended upon those resources ! The small boat sector has always survived by being versatile. This is an excellent opportunity to place a tool in their box that may allow them to survive in the harsh business environment that exists in small boat commercial fishing today. I not only a commercial fisherman, but I also am currently a member of the State of Maine Scallop Advisory Council as the public member and I say that as the public is becoming more educated and involved, they are demanding more input in these issues. My sense is that the public emphatically thinks that there should be a place preserved for the small boat fleet where they can harvest and live in a responsible community minded way. This has become very clear to me as I have witnessed the issues around fleet diversity. I have other thoughts on the issues surrounding the NGOM management area I hope to have an opportunity to share in the future. Sincerely Ira "Tad" Miller F/V Mallery Sky, Matinicus Island, Maine and F/V Julie Ann, Tenants Harbor, Maine.

November 8, 2013
Deirdre Boelke, Sea Scallop Plan Coordinator
New England Fishery Management Council
50 Water Street
Newburyport, MA 01950

Dear Deirdre:

I am writing to ask that the Scallop Committee request the full Council to include correction of Northern Gulf of Maine (NGOM) scallop management inconsistencies on its list of 2014 priorities.

Amendment 11 established the NGOM management area as a separate management unit but simultaneously implemented regulatory inconsistencies that prevent it from being managed either separately or appropriately. These inconsistencies are summarized below:

- The NGOM area is protected by a TAC, a possession limit and a dredge size restriction, but none of these measures apply to LA DAS vessels.
- LA DAS vessels may take an unlimited amount of scallops from the NGOM by use of a DAS allocated to them based on the status of the (much larger) resource outside the NGOM. They are only required to stop fishing if the TAC is reached by NGOM and GC IFQ vessels *fishing under the significant constraints of a possession limit and a dredge size restriction.*
- LA DAS vessels and NGOM vessels are able to fish in state waters without having their landings deducted from the NGOM TAC, but IFQ vessels are not able to do so. GC IFQ vessels' landings in state waters are deducted from both the NGOM TAC and from their individual allocation, *which is allocated to them based on the status of the resource outside the NGOM.*

When establishing the NGOM Management area, the Council recognized the area experiences spasmodic booms and busts. It would be imprudent to wait for the area to "boom" before addressing these problems. No vessel should be able to fish in the NGOM using an allocation assigned to it based on the much larger resource south of 42 20. The possession limit, dredge size restriction and TAC established to protect the NGOM from overharvest should apply to all vessels that fish there.

The NGOM Management Area was created to provide continued access to the NGOM scallop resource for the small boat fishermen who had traditionally targeted it when the resource was abundant. Inconsistencies threaten the viability of the fishery and of the resource itself, but they can be fixed before they result in loss of fishing opportunities if they are addressed now. If we wait, the NGOM management area may never serve the purpose for which it was intended.

It would be relatively simple to correct these problems. All vessels fishing in the NGOM should be bound by the measures designed to protect the NGOM resource, and IFQ vessels should be given the same opportunity to fish in Maine's state water fishery as is offered to NGOM and DAS vessels. I request that the Council prioritize these corrections and make them as soon as possible. The longer we wait, the more dangerous the situation becomes and the harder it will be to correct it. Thank you for your consideration.

Yours truly,

Togue Brawn
Maine Dayboat Scallops, Inc

Deirdre Boelke

Subject: FW: NGOM Scallop Access

From: Alex Todd [<mailto:alextodd207@gmail.com>]
Sent: Thursday, November 07, 2013 3:04 PM
To: Deirdre Boelke; Peter Hughes; Mary Beth Tooley
Subject: NGOM Scallop Access

To: NEFMC Scallop Committee and Advisory Panel

From: Alex Todd, F/V Jacob and Joshua, Chebeague Island Maine

November 7, 2013

Dear Mr. Hughes and members of the Advisory Panel and Ms. Tooley and members of the Scallop Committee:

I'm a proud multi-generational fisherman, I am told at least eight or more. I have deep concerns about the future of fishing, particularly ensuring that younger generations continue to be involved. Unfortunately, the restrictions and hoops one has to jump through for licenses and access discourages young people from joining this trade.

Although I do not agree with all regulations in place today, I understand why many of them are necessary. The Northern Gulf of Maine (NGOM) is regulated by a small possession limit, a dredge size restriction and a Total Allowable Catch, which I support. However, I do not understand why those regulations don't apply to everyone who fishes here.

In recent years there has been barely any fishing in the NGOM scallop zone. This should put everyone scalloping in this area on an equal level of historical participation.

As a small- 42' foot- boat, I have to diversify to make ends meet. This has cost me ground fish quota and access to below 42 20. In the 26 years I have fished on my own, I've gone from free range in the Gulf of Maine with my lobster traps, to none east of Cape Small and 392 south of Cape Elizabeth, and none in Area 3; then 88 days of ground fishing at equal weights to others, to a laughable IFQ based on just a few years that I didn't fish much.

In terms of scallops, I have gone from 400 pounds-a-day in the Gulf of Maine to 200 above 42 20 and a November 1 to April 15 state scallop season with no weight limit to a 70-day season with a weight that only works while the prices stay unusually high. I'm a chicken in a coop and it is constantly shrinking.

I strongly urge you to keep all vessels fishing this zone restricted to the same effort level. With the loss of shrimp days, ground fish quota and lobster price, this scallop access is vital to my family and my heritage and affects many other diversified fisherman like me.

Thank you,

Alex Todd

September 24, 2013

Deirdre Boelke, Sea Scallop Plan Coordinator
New England Fishery Management Council
50 Water Street
Newburyport, MA 01950

Dear Deirdre:

Amendment 11 established the NGOM as a separate unit to be managed independently of other federal waters and implemented measures to protect the NGOM resource from overharvest. However serious inconsistencies inhibit the effectiveness of these measures and create inequitable disadvantages for certain vessel categories. I am writing to request that the Council prioritize correction of these problems.

The Council decided to manage the NGOM separately for reasons outlined on page 41 of the Amendment 11 FSEIS:

- The majority of landings in the area were from Maine state waters, so it was important that management of the area be as compatible with Maine state regulations as possible.
- The GOM fishery was traditionally fished by small local boats and the Council considered local access to the resource to be important to the area's coastal communities.
- The NGOM scallop resource has never been a factor in setting target effort or removal rates under the Scallop FMP.
- The relative abundance of scallops in the major resource areas made it unlikely that a separate management program in the NGOM would impact LA DAS boats or GC boats from other areas.

All these statements are at least as valid now as they were when Amendment 11 was implemented. In fact recent improvements to Maine's state water scallop management program have rendered coordination of state and federal management even more important. But NGOM management problems persistently impede such coordination.

As recently noted by the NOAA Regional Administrator, 2012 state water landings exceeded projections by almost 500,000 pounds. This excess does not threaten the viability of federal management because the resource in state waters is not factored into the development of ACLs. But Mr. Bullard's notice of the overshoot prompts a question: why are both state water landings and the NGOM ACL shown on the OFL flowchart when *neither* is relevant to the process and determinations it illustrates? The presence of state water landings on the flowchart causes confusion, which will increase as Maine state management improvements yield increasingly higher state water landings. Confusion will be amplified if and when the federal waters of the NGOM rebound and landings from that area increase.

Amendment 11 established the NGOM management area as a separate management unit but simultaneously implemented regulatory inconsistencies that prevent it from being managed either separately or appropriately. These inconsistencies are summarized below:

- The NGOM area is protected by a TAC, a possession limit and a dredge size restriction, but none of these measures apply to LA DAS vessels.

memo @ Council mtg (9/24)

- LA DAS vessels may take scallops from the NGOM by use of a DAS allocated to them based on the status of the (much larger) resource outside the NGOM.
- LA DAS vessels are able to take an unlimited amount of scallops from the NGOM. They are only required to stop fishing if the TAC is reached by NGOM and GC IFQ vessels *fishing under the significant constraints of a possession limit and a dredge size restriction.*
 - LA DAS are capable of and authorized to remove an unlimited amount of scallops (potentially hundreds of thousands of pounds) from a resource that is supposedly managed by a 70,000 pound TAC.
 - Alarming, LA DAS vessels could theoretically fish the NGOM to commercial extinction before the smaller vessels had a chance to reach the TAC, which is the *only trigger* prompting a closure of NGOM waters.
- LA DAS vessels and NGOM vessels are able to fish in state waters without having their landings deducted from the NGOM TAC, but IFQ vessels are not able to do so. GC IFQ vessels' landings in state waters are deducted from both the NGOM TAC and from their individual allocation, *which is allocated to them based on the status of the resource outside the NGOM.*

If the NGOM is to be managed as a separate area, the inconsistencies that cloud that distinction, putting the resource there at risk of overharvest and disadvantaging GC IFQ vessels wishing to participate in the Maine state water fishery, should be corrected.

When establishing the NGOM Management area, the Council recognized the area experiences spasmodic booms and busts. It would be imprudent to wait for the area to "boom" before addressing these problems. No vessel should be able to fish in the NGOM using an allocation assigned to it based on the *much larger* resource south of 42 20. The possession limit, dredge size restriction and TAC established to protect the NGOM from overharvest should apply to all vessels that fish there.

The Maine Department of Marine Resources has made great improvements to its scallop management program in recent years. As these improvements continue, the inconsistencies between state and federal management will become more and more problematic.

Amendment 11 established measures as "a placeholder for future management of scallops in the NGOM if and when they return". But the problems listed above disadvantage GC IFQ fishermen wishing to participate in Maine's recovering state water fishery, and more importantly create a situation in which a single LA DAS vessel could quickly obliterate any nascent bloom that might otherwise lead to a recovery that would render the area worthy of Council attention.

The NGOM management area is important to Maine fishermen. Maine fishermen holding NGOM permits hope to participate in a small scale, sustainable fishery in the federal waters adjacent to their home ports. The Maine fishermen that hold GC IFQ permits should not be forced to choose between fishing in federal waters and taking full advantage of the burgeoning Maine state water fishery resulting from the management improvements many of them supported.

I recognize the NGOM management area is not a priority for the Council. It is precisely for this reason that I respectfully request that these management problems be corrected as soon as possible. If the Council wishes to limit time and resources spent managing the NGOM, it should correct the management inconsistencies that plague the area prior to abandoning it

I request that the Council prioritize these corrections and make them as soon as possible. Thank you for your consideration.

Yours truly,

Togue Brawn
Maine Dayboat Scallops, Inc

NGOM Scallop Management Inconsistencies
For Council consideration, September 25, 2013

Amendment 11 established the NGOM as a separate management unit to be protected by means of an independent suite of regulations. It is defined as the waters north of 42°20' N. lat. and within the boundaries of the Gulf of Maine Scallop Dredge Exemption Area.

Graphics on the OFL flowchart imply the NGOM TAC is somehow deducted from or developed from the OFL. **It is not.**

- The NGOM TAC is based on historic landings from the NGOM. It is developed independently of the assessments that yield the OFL and the ACL. The status of the NGOM is not factored into annual DAS or IFQ allocations.

The NGOM is (supposed to be) managed separately due to its unique characteristics. The NGOM scallop resource tends to be patchy and fluctuates widely.

Amendment 11 established the NGOM TAC, a daily possession limit and a dredge size restriction to protect the NGOM resource from overharvest. These measures do not apply to LA DAS vessels.

- While IFQ and NGOM vessels are limited to a 10.5' dredge size and a 200 pound possession limit, DAS vessels are not subject to these restrictions.
- LA DAS vessels may fish the NGOM using a DAS, which is allocated based on the status of the resource outside the NGOM. A vessel fishing under a DAS can take an unlimited amount of scallops from the NGOM.
 - **A LA DAS vessel could remove hundreds of thousands of pounds from an area *supposedly* managed by a 70,000 pound TAC.**
 - A single LA DAS vessel could theoretically fish the NGOM to commercial extinction before the IFQ and NGOM vessels were able to reach the 70,000 pound NGOM TAC, which is the only trigger that would prompt closure of the area.
- The area's history of wide fluctuations (booms and busts) suggests it will boom at some point. When that happens, it will attract DAS vessels. Given the patchiness of the NGOM resource, a single vessel could wipe out any burgeoning bloom.
- The NGOM is currently showing signs of recovery. It would be unwise to wait until the resource is "booming" to try to fix this problem.

The Council chose to establish the NGOM as a separate, independent management area. But priorities at the time prevented a thorough or effective separation. It would be far easier and more effective to address these problems prior to a resource recovery.

At a minimum, all vessels that fish the NGOM should be bound by the 200 pound possession limit and the NGOM TAC. No vessel should be able to fish in the NGOM using an allocation based on the health of the *much larger resource* to the south.

Rec'd e Council mtg (9/24)

CITY OF NEW BEDFORD

JONATHAN F. MITCHELL, MAYOR

October 25, 2013

New England Fishery Management Council
50 Water Street
Newburyport, MA 01950
Attn: Thomas A. Nies

Re: Atlantic Sea Scallop Small Dredge Program

Dear Members of the New England Fishery Management Council:

In anticipation of your November 20, 2013 meeting, I am writing to request that you reject the request to make the single dredge permit issue for the scallop fishery a priority for the 2014 fishing year. The elimination or amendment of the single dredge permit exemption ("Exemption") would have no effect on conservation of scallop fishery, but it would have severe, deleterious economic and human consequences on New Bedford. The port of New Bedford has been the nation's highest grossing fishing port for 12 consecutive years, based in large part on its scallop fishery, which generates over \$400 million in direct annual revenue.

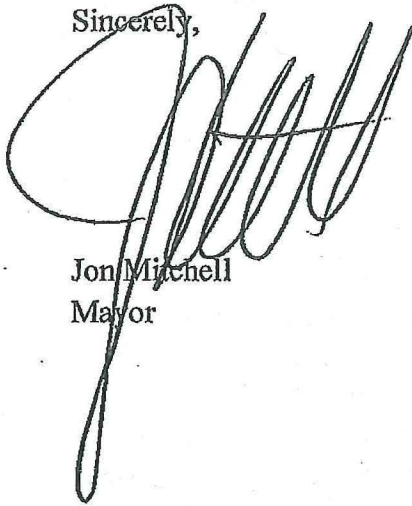

The proponent of the Exemption's elimination has argued that repeal of the Exemption would help protect the scallop fishery, but this is not true. No scientific evidence exists to support this request. The Exemption affects how each year's total scallop catch is allocated between vessels, but it has no effect whatsoever on the total amount of scallops that can legally be caught. That amount, the Annual Catch Limit, is, as you know, supposed to be based on science and conservation principles. Elimination of the Exemption would provide no added conservation benefit but would simply shift the profits of the scallop industry from one group of vessels to another group of vessel owners.

While repeal of the Exemption would not help further conserve the scallop fishery, it indisputably would harm the people of New Bedford. There are approximately 20 single dredge vessels that fish out of New Bedford. The crew members directly employed on those vessels support approximately 75 to 100 area families. If the Exemption were to be eliminated, the single dredge boat owners would go out of business, and dozens of New Bedford fishing families would have no means of support. Moreover, there would also be a negative ripple effect on the

many shoreside operations in New Bedford that do business with small dredge vessels, including fish houses, fuel companies, accountants, lawyers, ice plants, welders, painters, supply houses, electricians and trucking companies.

The Exemption has been in place for nearly 20 years and has helped the port of New Bedford and New Bedford fishing families survive trying times and in some instances thrive. Repeal of the Exemption would serve only to concentrate wealth in a subset of boat owners and to cast hundreds of New Bedford residents into certain economic distress. I urge you not to make the Exemption a priority for the 2014 fishing year and to express your support for continuation of the Exemption.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jon Mitchell', written over a large, stylized flourish.

Attorneys for Petitioner Compass Fishing Corp.

I. INTRODUCTION

Compass Fishing Corp. (“Petitioner” or “Compass”) hereby petitions the Secretary of Commerce (the “Secretary”) for a rulemaking under the Administrative Procedure Act, 5 U.S.C. §§ 551-559 (the “APA”), and the Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. §§ 1801-1884 (the “Magnuson-Stevens Act”), to repeal the outdated and ineffective “Small Dredge Program” currently set forth in 50 C.F.R. § 648.51(e) (the “Exemption” or the “Program”).¹ As discussed below, the Exemption was specifically designed for the effort control days-at-sea (only) management program instituted in 1994 in the Atlantic sea scallop fishery under the Atlantic Sea Scallop Fishery Management Plan (the “FMP”). In light of subsequent regulatory changes in the fishery, the Exemption no longer serves the function for which it was originally intended. Worse yet, it has provided a loophole that has significantly increased fishing mortality and fishing capacity for Atlantic scallops in contravention of the Program’s original purpose. It has also inequitably reallocated large portions of the catch—estimated to be approximately five million pounds worth over \$50 million annually—to vessels not otherwise qualified as “full-time” or “part-time” fleet vessels. The solution to these problems is a simple one—repeal of the Exemption—that would still allow current Program participants to fish, but at the classification level for which they actually qualify.

II. BACKGROUND

A. Interest of the Petitioner

The New England origins of Petitioner date back to the late 1970s. Compass is a family business, owned and operated for the past 35 years by Ray Starvish Sr., who has recently been joined in the business by his son, Ray Jr. Today, Compass owns two boats, K.A.T.E. and K.A.T.E. II, which operate out of the Port of Fairhaven, New Bedford, Massachusetts. Both

¹ The rule is set forth in its entirety in Appendix A to this Petition.

vessels are western-rigged² scallop fishing boats that carry the same seven-person crew. They fish on Georges Bank to the north and the Delmarva³ to the south.

Ray Starvish Sr. has been in frequent attendance at New England Fishery Management Council (the "Council" or the "NEFMC") meetings since the mid-1980s, and participated in the proceedings in which the Exemption was adopted in 1993-94. As a qualified full-time scalloper operating in the fishery, Compass has grown increasingly concerned about the deleterious effect of the Exemption, both on its own economic livelihood and on the fishery itself. In recent years, Mr. Starvish has been in frequent correspondence with the Council and with the National Marine Fisheries Service ("NMFS"), advocating for repeal or reconsideration of the Exemption.⁴

B. The Exemption Was a Creature of a Previous Management Regime Focused on Effort Control

The Exemption was created in 1994 as a last-minute insertion to Amendment 4 of the FMP. *See 59 Fed. Reg. 2757 (Jan. 19, 1994)*. Amendment 4 introduced a significant change to how the fishery was managed, as it shifted the primary management strategy from a meat count (*i.e.*, size) control management system, to an effort control program for all resource areas. To that end, it established a limited entry program, under which three categories of limited-access permits were created: "Full-time" fleet vessels, "Part-time" fleet vessels, and "Occasional" fleet

² A "western-rigged" fishing boat is a boat that has the pilot house forward of mid-ship, and tows over the stern.

³ "Delmarva" refers to the southern-most portion of the scallop fishery, comprising areas off the coasts of Delaware, Maryland, and Virginia.

⁴ Of relevance to the present Petition, Mr. Starvish has corresponded on previous occasions with NMFS Regional Administrator Patricia A. Kurkul about repealing the Exemption. Responding to an August 11, 2010 letter from Mr. Starvish, Ms. Kurkul, by letter dated August 26, 2010, advised that she was forwarding Mr. Starvish's informal request for repeal to the Council for consideration in subsequent amendments to the FMP. Later, in response to an October 8, 2010 follow-up letter from Mr. Starvish, Ms. Kurkul responded by letter dated January 24, 2011, advising Mr. Starvish that she had forwarded his letter to the Council for consideration at its November 2010 meeting, but that the Council decided not to take action on the issue at that time. She also indicated that the issue was brought to the Executive Committee for discussion, but was not identified as a management priority for the year. Ms. Kurkul agreed to forward Mr. Starvish's most recent letter to the Council so that they could "consider addressing [his] concerns through a future action."

vessels. The expectation under this system was that vessels with Part-time and Occasional permits would receive only 40 and 8.3 percent, respectively, of a full-time allocation. The Council's primary objective with this new framework in Amendment 4 was "to reduce the fishing mortality rate to eliminate the overfished condition of Atlantic sea scallops." *See 59 Fed. Reg. at 2757.*

The Exemption was added to Amendment 4 at the eleventh hour, without any study or analysis of its expected impact. In essence, the Exemption offers scallop vessels the option of more days-at-sea if they agree to employ less intensive harvesting practices. Specifically, vessels classified as "Part-time" and "Occasional" have the annual option to fish under the next higher classification (*i.e.*, "Full-time" for "Part-time" vessels, and "Part-time" for "Occasional" vessels)—thereby having more days-at-sea—if they are willing to use and carry no more than a single dredge not to exceed 10.5 feet (3.2 m) in width, and have no more than five people on board, including the operator. *See id. at 2758.* The Council expressly envisioned that these gear and crew size limitations would reduce the efficiency of Program participants. *See id.* ("The specific management measures that will be used to achieve the necessary reduction in fishing effort include . . . an annual option for vessels in the Part-time or Occasional category to fish in the next higher vessel group if they use only one dredge no more than 10.5 feet (3.2 m) in width and their crew complement (including the operator) is five or less.") (emphasis added).

At the time the Exemption was enacted, its proponents urged that it was necessary to assist Maine small boat (*i.e.*, single dredge) scallop fishermen, thereby "allow[ing] for a continuation of a traditional fishery." NEFMC Minutes of Meeting on May 12-13, 1993 ("NEFMC Meeting Minutes"). Council Member Bill Brennan from Maine, at the Council meeting held in Mystic, Connecticut on May 12-13, 1993, offered a motion for a small dredge

exemption on behalf of 32-34 small dredge Maine scallop vessels. In announcing approval of the motion, Council Chairman Brancaleone summarized the issue as follows:

[The next issue] is at the request of the so-called small scale fishermen, primarily from Maine. A class of vessels that basically has fished at varying levels but have been largely unrecorded in terms of their performance and landings. And largely confined their activities to the Gulf of Maine. We approve, the committee approved, a special authorization – a consideration that would allow them to use a single ten and one-half foot [dredge] which I believe is the present maximum size dredge allowed in Maine. These individuals would be allowed to move from part-time, if they're so classified, or occasional, to move up one step provided they use this single dredge, only one dredge.

*Id.*⁵ As indicated by the Chairman, proponents of the Exemption claimed it was necessary to aid small-scale fishermen, primarily from Maine, who would otherwise have difficulty documenting their appropriate classification under the FMP:

Gulf of Maine fishermen commented that their historical practice of scalloping in state waters and occasionally at Fippennies Ledge and Georges Bank with small dredge was not taken into account. Furthermore, they argued that incomplete data collection and difficulty in documenting their complete scalloping history would result in mis-classification. The Council responded by modifying the group assignment rules, the gear size restrictions, and the crew limits.

NMFS, Final Amendment 4 and Supplemental Environmental Impact Statement to the Atlantic Sea Scallop Fishery Management Plan, at p. 6 (1993).

In addressing this concern, however, the Council could not undermine the primary objective of Amendment 4 “to reduce the fishing mortality rate to eliminate the overfished condition of Atlantic sea scallops.” 59 *Fed. Reg.* at 2757. Thus, supporters of the Exemption assured the Council that the gear and crew size restrictions would counterbalance the greater number of days-at-sea for Program participants, making for a conservation-neutral policy. The meeting minutes show that the Council was ultimately persuaded by this argument, believing that

⁵ At the request of Council member Dick Allen, the Council subsequently adopted the additional qualification requiring that vessels participating in the Program carry no more than a five-person crew in order to limit shucking power. See NEFMC Meeting Minutes.

the fishing efforts per day of Program participants would be less than half of that for larger vessels. *See* NEFMC Meeting Minutes. The Council further estimated that a full-time small dredge vessel with a five-person crew would have a shucking capacity of approximately 700-800 pounds per day, as compared to a full-time large dredge vessel that would have a daily shucking capacity of 1,500-2,000 pounds. This projected to approximately 40% catch/production/landings of a full-time large dredge vessel. *Id.* And when a concern was raised about vessels capable of large dredge operations utilizing the Exemption, its supporters claimed the large disparity in efficiency between large and small dredges would eliminate any economic incentive for gaming the system. Thus, the Council was told, and ultimately believed, that by reducing drag size and crew, it could grant more days-at-sea for small-scale fishermen, thereby preserving a traditional fishery without compromising Amendment 4's ultimate objective of restoring stocks of Atlantic sea scallops. The Exemption, in other words, was specifically designed for an effort control system of management, offering a particular trade-off based on the relevant metrics for that particular system.

C. The Undermining of the Exemption by the Shift to a Spatial Management Strategy for the Fishery

Despite serious concerns with the hasty process and lack of adequate analysis and review in 1994, the Exemption was adopted and has been part of the FMP ever since. Regrettably, it is now clear that the Exemption has become merely a regulatory loophole through which (mostly non-Maine) fishing interests can operate at a higher classification level without the concomitant trade-offs originally intended with the gear and crew size limitations of the Exemption. The cause of this shift has been the evolving regulatory framework for the fishery, in which the days-at-sea/effort control approach has been de-emphasized, while the Exemption has remained the same.

The key factor that has undermined the Exemption as it was originally conceived has been the shift toward a spatial management strategy for the fishery. As discussed above, Amendment 4 regulated scallop fishing under a “days-at-sea” approach focused upon effort control, whereby vessels were allocated a certain number of days-at-sea based upon their classification in the fishery (*i.e.*, Full-time, Part-time, Occasional). Those Part-time and Occasional vessels wishing to have more days-at-sea than they could otherwise qualify for, had the option of obtaining a higher classification under the Exemption, in exchange for the associated gear and crew size limitations. This presented the Council with what it believed to be a conservation-neutral trade-off, the advantages of which were left up to individual fishing interests to weigh: less efficient fishing for more time (under the Exemption), or more efficient fishing for less time (without the Exemption).

In 1999, however, the Council adopted the Access Area Program, which granted access to previously closed areas for scallop fishing. Georges Bank closed areas were opened to scallop fishing starting in 1999 pursuant to Framework 11 and later Framework 13. *See* Proposed Framework 24 SAFE Report, Appendix I, distributed at the NEFMC Scallop Plan Development Team (the “PDT”) Meeting on Aug. 20-21, 2012. Frameworks 14 and 15 provided controlled access to Hudson Canyon and Virginia/North Carolina areas. *Id.* Then, in 2004, the Council adopted Amendment 10 to the FMP, which fundamentally changed the way the scallop fishery had been managed: “The primary intent of Amendment 10 is to introduce spatial management of adult scallops, taking advantage of resource heterogeneity to improve yield and minimize collateral adverse impacts on other fisheries and the marine environment.” NMFS, Final Amendment 10 to the Atlantic Sea Scallop FMP with a Supplemental Environmental Impact Statement, Regulatory Impact Review, and Regulatory Flexibility Analysis, p. 3-2 (Dec. 2003).

This new spatial management strategy emphasized high landings per unit effort (“LPUE”) to minimize dredge bottom time, reduce fishing time and reduce expenses such as fuel.

The shift to a spatial management strategy focused on LPUE under Amendment 10 has left the benefits of the Exemption in place (*i.e.*, the ability to step up to a higher classification), while largely eliminating its disincentives. This is because under the new regime, small dredge vessels receive the same number of access trips, pounds, and crew size, as compared to full-time large dredge vessels. *See, e.g.*, 50 C.F.R. § 648.51(e)(3)(i) (“There is no restriction on the number of people on board for vessels participating in the Sea Scallop Area Access Program as specified in § 648.60[.]”). Vessels fishing in closed areas are now limited only by total allowable catch, not the number of days-at-sea, and thus small dredge vessels can fish in access areas with a full crew for as long as necessary in order to catch their allocated pounds. And the high LPUE in access areas means that even with a single, small dredge, vessels can harvest significantly more scallops than they could in the open areas. Thus, the only disadvantage of having a smaller dredge on Access Area trips is the marginal additional trip expenses, such as food and fuel.

D. The Surge in Vessels Utilizing the Exemption and Re-allocation of the Scallop Harvest to those Vessels

With these changes, the Exemption has become, in essence, an attractive loophole, offering a “carrot” (higher classification) without the “stick” (lower yields) that existed under previous iterations of the FMP. Accordingly, Part-time and Occasional vessels have flocked to avail themselves of the Exemption. Between 1994 and 2000 when scallop management relied entirely on “days-at-sea,” there were never more than five Full-time small dredge permits. Since then, the number of Full-time small dredge permits has increased tenfold, reaching a high of 63 in 2007. *See* Table 1 below.

Table 1.

| Permit Category | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|------------------------|------|------|------|------|------|------|------|------|------|------|------|------|
| Full-time small dredge | 3 | 13 | 25 | 39 | 48 | 57 | 59 | 63 | 56 | 55 | 54 | 53 |

In 2010, in addition to the 54 Part-time scallop vessels that upgraded to Full-time small dredge vessels, 35 Occasional scallop vessels upgraded to Part-time small dredge vessels. See Proposed Framework 24 SAFE Report, Appendix I, distributed at the NEFMC Scallop PDT Meeting on Aug. 20-21, 2012.

This trend did not go unnoticed by the PDT. In a September 1, 2004 Scallop Management Advice Memorandum to the Scallop Oversight Committee, the PDT included the following recommendation on the Exemption:

Another issue related to the changing characteristics of the fishing fleet and capacity is the increasing number of small dredge permits, which have increased from 7 permits in 2000 to 63 permits in 2004 (with a corresponding decrease in part-time and occasional full-size dredge and trawl permits from 55 to 13). More analysis is needed to determine how this change in permits has affected DAS allocations to limited access vessels and fishing mortality, which may be a suitable focal point for the 2005 SAFE Report. **More important to this potential re-evaluation would be a determination of the past and present objective of the small dredge permit, so that [it] can be determined whether the present system is achieving this objective.**

PDT, Memorandum on Scallop Management Advice, Sept. 1, 2004 (emphasis added). No such re-evaluation ever occurred.

Along with the increasing number of vessels utilizing the Exemption, there has been a corresponding sharp increase in the allocation of the resource to small dredge vessels.

Framework Adjustment 18 observed that:

Another important trend was that vessels with part-time and occasional permits were converted into fulltime or part-time small dredge permits as the resource conditions improved and the daily catches for a vessel with a small dredge

permit became closer to the daily catches of a vessel with a large dredge permit.

NMFS, Framework Adjustment 18 to the Atlantic Sea Scallop FMP, Including an Environmental Assessment, Regulatory Impact Review, Regulatory Flexibility Analysis and SAFE Report, p. 4-18 (Dec. 2007) (emphasis added). Framework Adjustment 18 also explained:

The striking increase in the scallop revenue per full-time vessel according to the gear categories is evident from Table 40. While the vessels in all categories have more than doubled their annual scallop revenue during 1999-2004, **annual scallop revenue per full-time small dredge vessel almost tripled explaining the incentive to transfer part-time permits to full-time small-dredge permit during recent years.**

Id. at 4-23 (emphasis added). Again, this tripling of revenues by full-time small dredge vessels was primarily caused by the increase in catch by this group resulting from rotational area management, where full-time small dredge vessels received the same number of access trips and pounds as bona fide full-time vessels. In sum, it is now clear that the premise upon which the Exemption was founded—that a small dredge significantly reduces a vessel’s take—is simply not true.

E. Unfairness to Properly Categorized Vessels

The foregoing dynamic has resulted in an unfair and unintended reallocation of the scallop resource to those vessels that did not originally qualify for an upgraded category. In August 2011, H. Kite-Powell, a Research Specialist at the Marine Policy Center of the Woods Hole Oceanographic Institution, produced an economic study entitled “Estimated Effect of the Small Dredge Exemption on Scallop Landings.”⁶ It sought to quantify the per vessel gains conferred upon users of the Exemption. The following table (here labeled Table 2), set forth in the Kite-Powell report as Table 3, summarized those gains from 2008 and 2009:

⁶ A copy of the report is attached as Appendix B to this Petition.

Table 2.

| | Landings per vessel per year (lbs) | |
|--|------------------------------------|---------|
| | 2008 | 2009 |
| Part time vessel upgrading to full time small dredge | | |
| Fishing part time as two-dredge scallop vessel | 71,360 | 69,330 |
| Fishing full time small dredge | 120,350 | 138,950 |
| Gain from upgrade | 48,990 | 69,620 |
| Occasional vessel upgrading to part time small dredge | | |
| Fishing occasionally as two-dredge scallop vessel | 14,570 | 14,170 |
| Fishing part time small dredge | 50,620 | 51,450 |
| Gain from upgrade | 36,050 | 37,280 |

Based on these trends, the report estimated the effective transfer of the allocation from Full-time permits to Part-time and Occasional boats operating under the Exemption to be between 14,900 and 19,500 lbs/year for each Full-time permit, with 50-75% of the total coming from Access Area landings. For 2010, the report estimated (conservatively) that vessels utilizing the Exemption would accrue between 3.9 to 5.1 million pounds in additional scallop landings. Under these calculations, the cost to each Full-time vessel was expected to be more than \$200,000, with the potential for even greater losses if additional access areas were to be created.

III. STATUTORY AND REGULATORY AUTHORITY FOR THIS PETITION

This Petition invokes the authority of the Secretary pursuant to the APA and the Magnuson-Stevens Act.

A. Administrative Procedure Act

The APA states that “[e]ach agency shall give an interested person the right to petition for the issuance, amendment, or repeal of a rule.” 5 U.S.C. § 553(e). If such a petition is denied the agency must provide “a brief statement of the grounds for denial.” *Id.*, § 555(e); *Nat’l Mining Ass’n v. U.S. Dep’t of the Interior*, 70 F.3d 1345, 1352 (D.C. Cir. 1995). This right “entitles the petitioning party to a response on the merits of the petition.” *Fund for Animals v. Babbitt*, 903 F. Supp. 96, 115-16 (D.D.C. 1995). Agencies must respond to petitions “within a

reasonable time,” to “proceed to conclude a matter presented to it.” 5 U.S.C. § 555(b).

Accordingly, the Secretary must “fully and promptly consider” all petitions presented to her.

WWHT, Inc. v. F.C.C., 656 F.2d 807, 813 (D.C. Cir. 1981).⁷

B. Magnuson-Stevens Act

Under the Magnuson-Stevens Act, the Secretary plays an integral role in the realization of the Act’s goals by providing guidance to the fishery Councils with respect to their operations and exercising rulemaking authority to guide and implement Council actions. This includes “assist[ing] in the development of fishery management plans” by establishing advisory guidelines based on national standards, *see* 16 U.S.C. § 1851(b) and 50 C.F.R. Part 600, Subpart D, and issuing general regulations governing Council operations. *See generally* 50 C.F.R. Part 600. The Secretary also ensures that regulations proposed by the Councils “are consistent with the fishery management plan [and any] plan amendment[.]” *id.*, § 1854(b)(1), publishes both proposed and final rules under the Act and generally carries out rulemaking responsibilities for fishery management measures. *Id.*, 16 U.S.C. §§ 1854(b)(2),(3). In the event of any inconsistency, the Act empowers the Secretary to “notify the Council in writing of the inconsistenc[y] and provide recommendations on revisions.” *Id.*, 16 U.S.C. § 1854(b)(1)(B). The Secretary further has a “responsibility to carry out any fishery management plan or amendment approved or prepared by him, in accordance with the provisions of [the Magnuson-Stevens Act].” *Id.*, § 1855(d). Finally, the Magnuson-Stevens Act provides, “The Secretary may promulgate such regulations, in accordance with section 553 of title 5, United States Code, as

⁷ NMFS has developed Operational Guidelines, pursuant to the Magnuson-Stevens Act, for the development, review, approval, and implementation of FMPs, amendments, and other related fishery management actions. Included within the Guidelines are “Procedures for Development of Regulations,” Paragraph 14 of which specifically addresses petitions to undertake rulemaking. This Petition is consistent with such Procedures.

may be necessary to discharge such responsibility or to carry out any other provisions of this Act.” *Id.*

IV. THE SECRETARY SHOULD DIRECT THE COUNCIL TO TAKE ACTION LEADING TO REPEAL OF THE ANACHRONISTIC EXEMPTION IN SERVICE OF THE REQUIREMENTS OF THE MAGNUSON-STEVENSON ACT

The Magnuson-Stevens Act was enacted to prevent overfishing, rebuild overfished stocks, and establish a comprehensive fishery conservation and management scheme. *See* 16 U.S.C. §1801(a)-(b). Pursuant to these goals, Congress intended that fishery management programs “utilize[] . . . the best scientific information available.” *Id.*, §§ 1801(c)(3), 1851(a)(2). It is now manifestly clear from the best scientific information available that the Exemption is being used as a loophole to harvest significantly greater quantities of Atlantic sea scallops. It is also clear why this has occurred—because the regulatory underpinnings for the Exemption have changed, while the Exemption itself has not. Under the current management approach, there is no reason for providing a stepped-up classification for Part-time and Occasional vessels, and doing so threatens the resource and results in an inequitable reallocation to unqualified vessels, contrary to Section 301(a)(4) of the Magnuson-Stevens Act, 16 U.S.C. § 1851(a)(4). The Secretary can and should close this loophole by directing the Council to take action leading to repeal of the Exemption. Doing so would require no great expenditure of effort, as no new rule is needed to take its place, and would not deprive any current Program participants of the right to fish. It would simply require that all participants fish under the classification for which they truly qualify, thereby promoting the sustainability and fair allocation of the scallop resource.

V. CONCLUSION

For the foregoing reasons, Petitioner respectfully submits that the Secretary should direct the Council to undertake action leading to a rulemaking to repeal the Exemption.

Date: September 12, 2013

(C) Vessels subject to the requirements in paragraph (b)(5)(ii) of this section transiting waters west of 71° W long., from the shoreline to the outer boundary of the Exclusive Economic Zone, are exempted from the requirement to only possess and use TDDs, provided the dredge gear is stowed in accordance with § 648.23(b) and not available for immediate use.

(D) *TDD-related definitions.* (1) The cutting bar refers to the lowermost horizontal bar connecting the outer hauls at the dredge frame.

(2) The depressor plate, also known as the pressure plate, is the angled piece of steel welded along the length of the top of the dredge frame.

(3) The top of the dredge frame refers to the posterior point of the depressor plate.

(4) The struts are the metal bars connecting the cutting bar and the depressor plate.

(c) *Crew restrictions.* Limited access vessels participating in or subject to the scallop DAS allocation program may have no more than seven people aboard, including the operator, when not docked or moored in port, except as follows:

(1) There is no restriction on the number of people on board for vessels participating in the Sea Scallop Area Access Program as specified in § 648.60;

(2) Vessels participating in the small dredge program are restricted as specified in paragraph (e) of this section;

(3) The Regional Administrator may authorize additional people to be on board through issuance of a letter of authorization.

(4) A certified at-sea observer is on board, as required by § 648.11(g).

(d) *Sorting and shucking machines.* (1) Shucking machines are prohibited on all limited access vessels fishing under the scallop DAS program, or any vessel in possession of more than 600 lb (272.2 kg) of scallops, unless the vessel has not been issued a limited access scallop permit and fishes exclusively in state waters.

(2) Sorting machines are prohibited on limited access vessels fishing under the scallop DAS program.

(e) *Small dredge program restrictions.* Any vessel owner whose vessel is assigned to either the part-time or Occa-

sional category may request, in the application for the vessel's annual permit, to be placed in one category higher. Vessel owners making such request may be placed in the appropriate higher category for the entire year, if they agree to comply with the following restrictions, in addition to, and notwithstanding other restrictions of this part, when fishing under the DAS program described in § 648.53:

(1) The vessel must fish exclusively with one dredge no more than 10.5 ft (3.2 m) in width.

(2) The vessel may not use or have more than one dredge on board.

(3) The vessel may have no more than five people, including the operator, on board, except as follows:

(i) There is no restriction on the number of people on board for vessels participating in the Sea Scallop Area Access Program as specified in § 648.60;

(ii) The Regional Administrator may authorize additional people to be on board through issuance of a letter of authorization.

(iii) A certified at-sea observer is on board, as required by § 648.11(g).

(f) *Restrictions on the use of trawl nets.*

(1) A vessel issued a limited access scallop permit fishing for scallops under the scallop DAS allocation program may not fish with, possess on board, or land scallops while in possession of a trawl net, unless such vessel has been issued a limited access trawl vessel permit that endorses the vessel to fish for scallops with a trawl net. A limited access scallop vessel issued a trawl vessel permit that endorses the vessel to fish for scallops with a trawl net and general category scallop vessels enrolled in the Area Access Program as specified in § 648.60, may not fish with a trawl net in the Access Areas specified in § 648.59(b) through (d).

(2) *Replacement vessels.* A vessel that is replacing a vessel authorized to use trawl nets to fish for scallops under scallop DAS may also be authorized to use trawl nets to fish for scallops under scallop DAS if it meets the following criteria:

(1) Has not fished for scallops with a scallop dredge after December 31, 1987; or

Appendix B

Estimated Effect of the Small Dredge Exemption on Scallop Landings

H. Kite-Powell
Research Specialist
Marine Policy Center
Woods Hole Oceanographic Institution
August 2011.

Under the small dredge exemption (SDE) created in 1994 as part of Amendment 4 to the Atlantic Sea Scallop Fisheries Management Plan, “part-time” and “occasional” scallop fishing vessels are allowed to increase their fishing activity in exchange for restrictions on gear and crew. Specifically, scallop vessels originally categorized as “part-time” (more than 37 but fewer than 150 days at sea (DAS), on average, in 1985-1990) can upgrade to full-time status, and vessels originally categorized as “occasional” (averaging fewer than 38 DAS in 1985-1990) can upgrade to part-time status, in exchange for restricting fishing gear to a single 10.5 ft dredge and limiting crew to no more than five. Following the advent of Amendment 10 to the Atlantic Sea Scallop Fishery Management Plan in 2004, the number of scallop vessels taking advantage of the SDE increased significantly. In 2010, 54 part-time scallop vessels upgraded to full-time small dredge permits and 35 occasional scallop vessels upgraded to part-time small dredge permits under the SDE. Here, we estimate the increase in annual scallop landings, under recent conditions, for vessels that take advantage of the SDE.

The tradeoff for a scallop vessel considering the SDE upgrade is a greater number of DAS for fishing in Open Areas and, possibly, a greater number of fishing trips to Access Areas, in exchange for a lower landings per unit effort (LPUE) during Open Area fishing due to the dredge and crew restriction. Table 1 shows LPUE for different categories of scallop vessels in Open Areas in 2008 and 2009.

| | Landings per unit effort (LPUE) | |
|---------------------------------|---------------------------------|-----------|
| | 2008 | 2009 |
| Full time scallop vessel | 1,768 lbs | 2,222 lbs |
| Full time small dredge | 948 lbs | 1,323 lbs |
| Part time small dredge | 731 lbs | 1,030 lbs |

Table 1: Open Area landings per unit effort, 2008 and 2009.

Source: NMFS/PDT.

Table 2 shows DAS and trip allocations by vessel category for 2008 and 2009.

| Effort Allocation | | | | |
|----------------------------------|------------------|----------------------|------------------|----------------------|
| | 2008 | | 2009 | |
| | Open Area DAS | Access Area Trips | Open Area DAS | Access Area Trips |
| Full time scallop vessel | 51 | 4 @ 18k lbs | 37 | 5 @ 18k lbs |
| Part time scallop vessel | 20 | 2 @ 18k lbs | 15 | 2 @ 18k lbs |
| Occasional scallop vessel | 4 | 1 @ 7.5k lbs | 3 | 1 @ 7.5k lbs |

Table 2: Effort allocation to different categories of scallop vessels, 2008 and 2009. Access Area trips are limited to 18,000 lbs landings for full time and part time, and 7,500 lbs landings for occasional vessels. Source: Amendment 15, Atlantic Sea Scallop Fishery Management Plan.

Table 3 summarizes the gains from upgrading under the SDE for 2008 and 2009.

| Landings per vessel per year (lbs) | | |
|--|---------------|---------------|
| | 2008 | 2009 |
| Part time vessel upgrading to full time small dredge | | |
| Fishing part time as two-dredge scallop vessel | 71,360 | 69,330 |
| Fishing full time small dredge | 120,350 | 138,950 |
| Gain from upgrade | 48,990 | 69,620 |
| Occasional vessel upgrading to part time small dredge | | |
| Fishing occasionally as two-dredge scallop vessel | 14,570 | 14,170 |
| Fishing part time small dredge | 50,620 | 51,450 |
| Gain from upgrade | 36,050 | 37,280 |

Table 3: Estimated gains per vessel from upgrading under the SDE, 2008 and 2009. Landings for regular scallop vessels are based on LPUE for full-time vessels.

As Table 3 shows, the estimated gain from upgrading a part-time two-dredge scallop vessel to full-time under the SDE was about 49,000 lbs in 2008 and nearly 70,000 lbs in 2009. The gains for upgrading an occasional two-dredge scallop vessel were 36-37,000 lbs. These estimates may understate the actual gains because the estimated landings fishing part-time or occasionally as a two-dredge vessel assume the LPUE for full-time two-dredge scallop vessels – and these may well be larger than those achieved by part-time and occasional vessels, if the data for SDE fishing are any indication (see Table 1).

In 2010, there were 54 full-time and 35 part-time scallop vessels operating under SDE upgrades. Assuming per-vessel gains similar to those estimated for 2008 and 2009, this suggests (conservatively)

Subject: Re: Single Dredge - Scallop Issue

Ms. Tooley -

I am writing to you on behalf of a number of small business people interested in the above referenced issue. I apologize for the late filing of the attached letter / petition. But, we had been under the impression that the issue of the "priority" to be assigned to the single dredge permit issue was not going to be discussed at your committee meeting this week. We had expected that it would be raised (if at all) at the November Meeting.

In anticipation of the November meeting, the attached letter / petition was prepared and signed by hundreds of people interested in preserving the integrity and the traditions of the small boat owners in Northeast Fishing ports from Maine to New Jersey.

If this issue is discussed at your committee meeting tomorrow, please accept this submission and share it with your group as input from the community members sharing the concerns of the fishing communities in the Northeast. If you require additional testimony (beyond this letter / petition), please call me at any time and I will make arrangements to have a representative present at the meeting this week. My cell number is (508) 525-0071.

Thanks very much for your anticipated cooperation.

New England Fishery Management Council
50 Water Street
Newburyport, MA 01950
Attn: Thomas A. Nies

RE: Atlantic Sea Scallop Small Dredge Program

Dear Mr. Nies:

Once again, the New England Fishery Management Council has been asked to eliminate or amend the Full Time Small Dredge Program. We the undersigned do not believe that there is any credible rationale or justification for further review of this request. Accordingly, we ask that the Council immediately reject the proposal. Furthermore, the below signers want to stress to the Council that the elimination of the Full Time Small Dredge Program would have dire financial consequences for hundreds of New England and Mid-Atlantic Families. In addition, it appears that only a few individuals out of the hundreds of Limited Access scallop permit holders supports the elimination of the small dredge fleet, desiring to undo a policy which has been in place for nearly twenty years.

The sole purpose of this push to eliminate full time small dredge vessels from the Atlantic Sea Scallop Fishery appears to be personal gain. Those opposed to the full time small dredge fleet have stated consistently that the full time small dredge vessels should be eliminated and that the scallops that the small dredge vessels would have caught should be allocated to the full time large dredge fleet. This argument violates two basic requirements of the Magnuson-Stevens Fishery Conservation and Management Act which stipulates that any changes in fishing regulations must consider: (a) conservation of the resource; and (b) the associated economic impact of the proposed change. The taking of allocation from one group of permit holders and transferring that allocation to another group of permit holders does not promote conservation. Moreover, the proposed change would unequivocally harm small dredge permit holders; the fishing crews that they employ; and the hundreds of shore-side businesses serving this segment of the industry. In addition, the loss of the associated tax revenue from the small dredge fleet, fishermen and support businesses would harm the fishing communities and the states in which they operate.

Full time small dredge vessels employ a maximum 10.5' dredge and they are limited to the use of five crew members. In contrast, a full time large dredge vessel can carry two dredges with a combined total of 30' of dredge and they can use seven men, allowing them to be more efficient in harvesting the resource. The increase in harvesting capability by transferring allocation from the small dredge fleet to the large dredge fleet would actually have a negative effect on conservation management.

Amendment Four, which created the Full Time Small Dredge Program, was passed in 1994 – nearly twenty years ago. Since that time nine amendments have been passed without any objections from the industry to curtail the full time small dredge operators.

Precedent has been established and reasonable investment backed expectations have been made by scores of fishing families. For the past nineteen years, the owners of full time small dredge vessels have based their business decisions on the long-term continued support from the industry and Council. The Council should not revisit its decision twenty years after the fact.

Since the inception of Amendment Four, full time small dredge vessels have fished exclusively for scallops and as a result are unable, due to changes in other fishery management programs, to fish for other species. Eliminating the full time small dredge program would essentially put these owners out of business; bankrupting them and forcing their crews into unemployment. The elimination of these boats from the fleet will result in an estimated 300 newly unemployed commercial fishermen. Job killing actions by the Council are (and should be) extremely unpopular. The elimination of the small dredge rights will lead to a long and costly political and legal fight. The boats of the small dredge fleet have earned the right through hard work and sacrifice to remain a part of the fishery.

The financial losses would not end with the boat owners and their crews, but would extend to the hundreds of shore support businesses serving the scallop industry, such as: fish houses, ice plants, welders, painters, supply houses, electricians and trucking companies. Recently, the Council was forced to issue severe restrictions on the groundfish industry and to reduce the allowable catch for the scallop industry. Because of those restrictions, shore support businesses are less profitable today than they were last year. Eliminating another sixty small vessels from a sustainable fishery would have a significant negative ripple effect throughout the industry and may force already struggling businesses to make further cuts or to close completely.

In addition to losses by shore support businesses, commercial banks along the coast of the Eastern United States would suffer significant losses from the elimination of the small dredge fleet. The majority of small dredge owners carry a mortgage on their vessels. Eliminating the small dredge fleet would render these boats (the banks' collateral) worthless. The majority of owners would not be able to satisfy their bank loans and would be forced to declare personal bankruptcy. These owners and their families would be wiped out and local banks throughout New England and the Mid-Atlantic would be forced to write-off \$50 million - \$100 million of bad commercial fishing loans.

Furthermore, as an industry, fishermen, scientists and regulators need to focus on high priority issues, such as: (i) further reductions to bycatch through rotational management and gear modifications; (ii) additional funding for research; (iii) more collaboration amongst fishermen, scientist and regulators; and (iv) improved closed area management. It is these issues that will allow the Atlantic Sea Scallop biomass to flourish. In terms of the health and sustainability of the fishery, the elimination of the Small Dredge Program is an issue of zero impact and therefore does not warrant the Council's time and attention.

It is our belief that the Council would be ill advised to consider eliminating the small dredge fleet and we request that the Council reject this discussion outright. In addition, we ask the Council to send a strong message that future requests to revisit this issue will be met with similar opposition.

EMPIRE FISHERIES, LLC
322 NEW HAVEN AVENUE
MILFORD, CONNECTICUT 06460

March 19, 2013

Ms. Mary Beth Tooley
Chairperson Scallop Committee
New England Fishery Management Council
50 Water Street
Newburyport, Massachusetts 01950

Dear Chairperson Tooley and Committee Members:

It seems that one segment of the scallop fleet desires to eliminate or cut back in some way another smaller segment of the scallop fleet.

I request the Committee NOT consider any revisiting of where and how the small dredge fleet was established in Amendment 4.

Respectfully,

Joseph Gilbert
F/V Regulus
F/V Furious

cc: Council, SC Cte, CBK, DB (3/25)

Subject: Small Dredge Scallop Fleet

Council Members,

I understand that certain members of the scallop fishery are once again pushing for the elimination (or significant modification) of the small dredge fleet. It is unfortunate that they continue to push for more personal gains at a time when we all need to be focused on priority issues such as bycatch reduction. Since I know that this issue has been raised once again and will be raised at future Council meetings, I wanted to provide the attached brief commentary on the repercussions from the elimination of the small dredge scallop fleet.

Thank you,

Cameron Miele
F/V Kathryn Marie
F/V Hunter

SMALL DREDGE EXEMPTION REMARKS

The repercussions from eliminating the Small Dredge Exemption would be devastating to hundreds of families across New England and the Mid-Atlantic. It would mean a loss of jobs and tax revenue at a time when this country cannot afford to lose either. The Magnuson-Stevens Fishery Conservation and Management Act requires that economic factors be considered when making management decisions. And from an economic standpoint the elimination of the small dredge fleet would be a net economic loss. The only benefit from eliminating the exemption would be to already highly successful boat owners as they would capture additional share of the fishery. In addition, the elimination of the small dredge exemption would not lead to additional conservation of the sea scallop resource.

- 1. Jobs:** Unemployment is the number one issue facing this country. The President, Congress, State and Local Leaders, and the American People are all concerned with the high rate of unemployment. The elimination of the Small Dredge Exemption will put full-time and part-time small dredge operators out of business as the full-time boats will not remain economical as part-time boats and the part-time boats will not remain economical as occasional boats. Total employment loss from the elimination of these boats from the fleet will generate an estimated 300 – 400 newly unemployed commercial fishermen. These boats also support hundreds of shore side support jobs. Job Killing actions by the Council will be extremely unpopular and will face a long and costly political and legal fight.
- 2. Priority Issues:** Fishermen, scientists and regulators need to focus on high priority issues such as: (i) improving safety; (ii) further reductions to bycatch; (iii) better funding for research; (iv) more collaboration amongst fishermen, scientist and regulators; and (v) improved closed area management. In terms of the health and sustainability of the fishery the elimination of the Small Dredge Exemption is an issue of zero importance and therefore does not warrant the Council's attention.

cc: CSA, MB (3/14)

3. **Significant Bank Write-offs and Bankruptcies:** While accurate figures are not available, anecdotal evidence suggests that the vast majority of small dredge owners carry a mortgage on their vessel. Eliminating the Small Dredge Exemption would render these boats and permits near worthless. The majority of owners would not be able to satisfy their bank loans and would therefore be forced to declare personal bankruptcy. These owners and their families would be essentially wiped out and local banks throughout New England and the Mid-Atlantic would be forced to write-off in the neighborhood of \$50 million - \$100 million of bad commercial fishing loans.
4. **Loss of Tax Revenue:** The vessels comprising the small dredge fleet contribute significant tax revenue to the Federal, State and Local governments. The remaining full-time boats that would pick up the incremental poundage would not contribute associated tax revenue sufficient to cover the lost revenue from the small dredge fleet. The elimination of the Small Dredge Exemption is a net loss in tax revenue.
5. **17-Year Precedent:** The Small Dredge Exemption has been in place for approximately 17 years and has been continually re-authorized. The boats of the small dredge fleet have earned the right through hard work and sacrifice to remain in the fishery. Precedence has been established.
6. **Backdoor Consolidation:** The Atlantic Sea Scallop fishery is sustainable. Since the fishery is not overfished there is no reason to eliminate boats from the fleet. This is not a health of the biomass issue, this is a money issue. The only motive of those that support the elimination of the Small Dredge Exemption is to garner additional pounds and force competition out of the fishery.
7. **Abandoned Vessels:** If these small dredge boats become essentially worthless their owners will have no reason to maintain the vessels and/or pay for their dockage. Those who can sell their boats will and those who cannot will leave them tied to the dock and neglected. The ports that formerly housed these working boats will now have to deal with the rusting hulks abandoned and tying up productive dock space.

February 25, 2013

Mr. Ray Starvish
PO Box 231
Fairhaven, MA 02719

Dear Ray:

Thank you for your letter of February 11, 2013 with enclosures. I have forwarded them on to the full Council for review and consideration. As you know, the Council has discussed this specific issue several times in the past when identifying annual Council work priorities every November. I recall one Council member raising this as an issue that merits further evaluation based on previous correspondence from you to the Council. However, each year your request for consideration falls "below the line" when compared to other more important priority issues facing the scallop management program and fishery.

I will hold on to this letter for the fall and include it with meeting materials for the Council priorities discussion and vote next November 2014. I encourage you to attend that meeting and express your concerns again to the Council directly. The last few years have been very busy for the scallop management program with implementation of mandated annual catch limits and accountability measures, actions to reduce Groundfish bycatch and sea turtles, and adjustments to the recently implemented general category IFQ program.

I thank you for your continued interest in fisheries management.

Sincerely,

Paul J. Howard
Executive Director

RAYMOND STARVISH

Attention: Council Members

Re: **SMALL DREDGE EXEMPTION PROGRAM**
Scallop FMP Amendment 4
50 CFR § 648.51(e) Adopted 1994

Dear Council Members:

I refer your attention to the Small Dredge Exemption Program and enclose an analysis of the *Program* as implemented in *Amendment 4*.

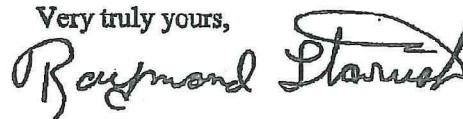

Since the implantation of the Access Area Program in 1999 and the adoption of area based quota management in 2004, the Small Dredge Exemption Program has become a loophole through which scallop vessels that would not qualify as full-time or part-time vessels are permitted to significantly increase their total landings. This is unfair and prejudicial to those vessels that qualify as full-time or part-time access permit vessels.

The Access Area Program assigns small dredge vessels the same total landings as large dredge vessels and places no limit on crew size in violation of New England Fishery Management Council's intention and objective in creating the Small Dredge Exemption Program. Accordingly and for the reasons outlined in the enclosed analysis, small dredge permit holders should be precluded from participating in access area trips because the smaller dredge size does not effectively limit their total landings.

In the alternative, I request that the Council reevaluate the Scallop Dredge Exemption Program pursuant to the Scallop Plan Development Team's recommendation, as described in further detail in the enclosed analysis.

I appreciate your time and attention to this matter. I would like to discuss this matter with you further during an upcoming New England Fishery Management Council Meeting.

P.S.
Please Listen
To The C.D.

Very truly yours,

Raymond Starvish

Re: SMALL DREDGE EXEMPTION PROGRAM
Scallop FMP Amendment 4
50 CFR § 648.51(e) Adopted 1994

Dear Mr. Starvish:

We refer to your request that our office investigate, evaluate, and present you with our analysis of the efficacy of the *Small Dredge Exemption Program* as implemented in *Amendment 4*.

Please take the following as our report on your request.

The Small Dredge Exemption Program was created as part of Amendment 4 to the Scallop Fishery Management Plan in order to assist Maine small boat [single dredge] scallop fishermen in continuing a traditional fishery. Since access to closed areas were opened to scallop fishing in 1999 and the subsequent adoption of area based quota management in 2004, the Small Dredge Exemption Program has become a loophole through which scallop vessels that would not qualify as full-time or part-time vessels are permitted to significantly increase their catch/production/landings. This is unfair and prejudicial to those vessels that qualify as full-time or part-time access permit vessels. Accordingly and for the reasons outlined below, the small dredge permit holders should be limited in their total allowable catch/production/landings as was the original intent in implementing the Small Dredge Exemption Program.

I. The Objectives of the Small Dredge Exemption Program are No Longer Being Achieved.

The NEFM Council's intention in including the Small Dredge Exemption Program into

Amendment 4 was to "allow for a continuation of a traditional fishery."¹ During the Council meeting in Mystic, CT on May 12 and 13, 1993, Council Member Bill Brennan from Maine offered a Motion on behalf of thirty-two to thirty-four [32-34] small dredge Maine scallop vessels to alter Amendment 4 to assist these fishermen. Council Chairman Brancaleone described the issue as follows:

*[The next issue] is at the request of the so-called small scale fishermen, primarily from Maine. A class of vessels that basically has fished at varying levels but have been largely unrecorded in terms of their performance and landings. And largely confined their activities to the Gulf of Maine. We approve, the committee approved, a special authorization - a consideration that would allow them to use a single ten and one-half foot which I believe is the present maximum size dredge allowed in Maine. These individuals would be allowed to move from part-time, if they're so classified, or occasional, to move up one step provided they use this single dredge, only one dredge.*²

Upon the request of Council Member Dick Allen, a third qualification was added that the vessels carry no more than a five [5] man crew.³ Amendment 4 includes the following:

*"Gulf of Maine fishermen commented that their historical practice of scalloping in state waters and occasionally at Fippennies Ledge and Georges Bank with smaller dredge was not taken into account. Furthermore, they argued that incomplete data collection and difficulty in documenting their complete scalloping history would result in mis-classification. The Council responded by modifying the group assignment rules, the gear size restrictions, and the crew limits. Vessels would be allowed to qualify for a single category increase in days at sea allocation if they continue to use the smaller, 10.5 feet dredges throughout the year and carry a crew of no more than five while scalloping."*⁴

The Small Dredge Exemption Program was instituted to allow thirty-two to thirty-four [32-34] small dredge vessels to continue a traditional fishery in the Gulf of Maine. To date, only one [1] of fifty-three [53] full-time small dredge vessels remains in the Gulf of Maine.

Furthermore, the Council believed that by reducing drag size and crew, the small dredge vessel's fishing efforts per day will be less than half of the larger vessels.⁵ The Council estimated that a small dredge vessel with a five [5] man crew will have a shucking capacity of approximately seven hundred to eight hundred pounds per day [700-800lb] as compared to a full-

¹ New England Fishery Management Council, Minutes of Meeting on May 12-13, 1993.

time large dredge vessel that has a fifteen hundred to twenty five hundred pound [1500-2500lb] shucking capacity. This projected to approximately forty percent [40%] catch/production/landings of a full-time large dredge vessel. However and as confirmed in the chart below, drag size and crew limitations did not have the intended effect on the small dredge vessel's fishing catch/production/landings. Small dredge vessels are now landing greater than seventy percent [70%] of the average landings for a full-time large dredge vessel, a far greater percentage of landings than was originally intended in implementing Amendment 4. See Chart below.

National Marine Fisheries Service, Northeast Region, NOAA, Summary of total and average scallop landings by Full-time Large and Small Dredge vessels, FY2007-FY2011, October 9, 2012

II. The Small Dredge Exemption Program did not Account for the Access Area Program.

The Small Dredge Exemption Program has been codified in 50 C.F.R. § 648.51. As defined below, small dredge permit holders must comply with the regulation when fishing under the DAS program. When the Small Dredge Exemption Program was created in 1994, the scallop access area program, which limits access to closed areas by number of trips and catch totals, was not established.⁷

| 2008 | Framework 19 | 95 | 33 | 5 | 12 | 0 |
| 2009 | Framework 19 | 97 | 37 | 5 | 12 | 0 |
| 2010 | Framework 21 | 66 | 39 | 4 | 12 | 0 |
| 2011 | Framework 22 | 80 | 32 | 4 | 12 | 0 |
| 2012 | Framework 22 | 82 | 34 | 4 | 12 | 0 |

Total DAS allocation per full-time vessel represents a rough estimate for years 2004-12 since DAS is allocated for open areas only. DAS allocation for access areas is estimated by assuming an equivalent 12 days-at-sea charge for each access area trip with a possession limit of 18,000 pounds.

As noted in the table below, there was a dramatic increase in the numbers of full-time and part-time small dredge vessels after the year 2000. This increase in small dredge permit holders corresponds with the introduction of the Access Area Program, where small dredge vessels received the same number of access trips, pounds, *and crew size*, as full-time large dredge vessels. By the year 2010, fifty-four [54] part-time scallop vessels upgraded to full-time small dredge vessels and thirty-five [35] occasional scallop vessels upgraded to part-time small dredge vessels.¹⁰ *See Chart below.*

Occasional category may request, in the application for the vessel's annual permit, to be placed in one category higher. Vessel owners making such request may be placed in the appropriate higher category for the entire year, if they agree to comply with the following restrictions, in addition to, and notwithstanding other restrictions of this part, *when fishing under the DAS program described in § 648.53*:

- (1) The vessel must fish exclusively with one dredge no more than 10.5 ft (3.2 m) in width.
- (2) The vessel may not use or have more than one dredge on board.
- (3) The vessel may have no more than five people, including the operator, on board, except as follows:
 - (i) There is no restriction on the number of people on board for vessels participating in the Sea Scallop Area Access Program as specified in § 648.60;
 - (ii) The Regional Administrator may authorize additional people to be on board through issuance of a letter of authorization.
 - (iii) A certified at-sea observer is on board, as required by § 648.11(g).⁷

⁸ Proposed Framework 24 SAFE Report, Appendix I, distributed at the NEFMC Scallop PDT Meeting on August 20-21, 2012.

| Permit category | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|------------------------|------|------|------|------|------|------|------|------|------|------|------|------|
| Full-time | 220 | 224 | 234 | 239 | 242 | 248 | 255 | 269 | 264 | 269 | 252 | 263 |
| Full-time small dredge | 3 | 19 | 25 | 39 | 48 | 57 | 59 | 69 | 56 | 55 | 64 | 53 |
| Full-time net boat | 17 | 19 | 18 | 18 | 15 | 19 | 14 | 12 | 11 | 11 | 11 | 11 |
| Total full-time | 240 | 253 | 275 | 293 | 305 | 324 | 328 | 351 | 321 | 325 | 317 | 316 |
| Part-time | 18 | 14 | 14 | 10 | 4 | 3 | 3 | 2 | 2 | 2 | 2 | 2 |
| Part-time small dredge | 4 | 6 | 8 | 19 | 25 | 30 | 34 | 35 | 32 | 34 | 34 | 22 |
| Part-time trawl | 20 | 18 | 10 | 8 | 3 | - | - | - | - | - | - | - |
| Total part-time | 40 | 36 | 32 | 37 | 33 | 33 | 37 | 37 | 34 | 37 | 36 | 34 |
| Occasional | 4 | 5 | 4 | 3 | 3 | 1 | 2 | 1 | 1 | - | - | - |
| Occasional trawl | 16 | 19 | 15 | 8 | 5 | 5 | - | - | - | - | - | - |
| Total occasional | 20 | 24 | 19 | 11 | 8 | 6 | 2 | 1 | 1 | 0 | 0 | 0 |
| Total limited access | 300 | 313 | 328 | 342 | 346 | 363 | 367 | 389 | 356 | 361 | 353 | 351 |

Notes: The permit numbers above include duplicate entries because replacement vessels receive new permit numbers and when a vessel is sold, the new owner would get a new permit number.

After 2000, part-time and occasional permit holders began taking advantage of the Small Dredge Exemption Program because the reduction in gear size had little effect/impact during Access Area trips. Vessels fishing in closed areas are limited in total allowable catch, not days at sea. Small dredge vessels can fish in access areas *with a full crew* for as long as necessary in order to catch their allocated pounds. Therefore, the only disadvantages to having a smaller dredge during access area trips are the additional trip expenses, such as food and fuel. As indicated on the chart below, the average landings for full-time large dredge and full-time small dredge vessels remains almost the same, and in some cases the average landings per small dredge vessels exceeds those by large dredge vessels. *See Chart below.*

Summary of total and average scallop landings by Full-time Large and Small Dredge vessels, FY2007-FY2011

The intended plan for the Small Dredge Exemption Program was that by restricting the dredge and crew size, vessels would automatically catch less than the full-time large dredge vessels. Therefore the limit in dredge and crew size would counteract the increase in days at sea and there would not be a significant impact to the scallop fishery. However, the limitation of having a small dredge has very little impact on the total landings of small dredge vessels during

¹¹ National Marine Fisheries Service, Northeast Region, NOAA, Summary of total and average scallop landings by Full-time Large and Small Dredge vessels, FY2007-FY2011, October 9, 2012.

access area trips. The Access Area Program has created a substantial loophole for all part-time and occasional permit holders to increase their days at sea and total landings, despite the fact that the current small dredge fishermen are not the Maine fishermen that the Small Dredge Exemption Program was created to protect.

III. No environmental impact statement was completed for the Small Dredge Exemption Program implemented in Amendment 4

Among each Council's primary tasks is the development and maintenance of a fishery management plan (FMP) for each fishery under its control. The MSA imposes content requirements on these FMPs, which must ultimately be approved by the National Marine Fisheries Service (NMFS), acting on behalf of the U.S. Secretary of Commerce.¹² Under NEPA, an agency is required to evaluate and make public the environmental consequences of its proposed action.¹³ However, the Council failed to evaluate the potential impact that the Small Dredge Exemption Program will have on the scallop fishery.

In 2004, the Scallop Plan Development Team acknowledged the increasing number of small dredge permit holders in a "Scallop management advice" memorandum to the Scallop Oversight Committee:

Another issue related to the changing characteristics of the fishing fleet and capacity is the increasing number of small dredge permits, which have increased from 7 permits in 2000 to 63 permits in 2004 (with a corresponding decrease in part-time and occasional full-size dredge and trawl permits from 55 to 13). More analysis is needed to determine how this change in permits has affected DAS allocations to limited access vessels and fishing mortality, which may be a suitable focal point for the 2005 SAFE Report. More important to this potential re-evaluation would be a determination of the past and present objective of the small dredge permit, so that it can be determined whether the present system is achieving this objective. (underscoring our emphasis).¹⁴

As the total number of small dredge permit holders increased, it became clear that part time permit holders were opting to engage in the small dredge program solely for the greater number of days at sea. The increase in small dredge permits and landings was never reviewed, despite the Development Team's recommendations that the small dredge program be evaluated for its impact on the scallop fishery.

IV. Conclusion

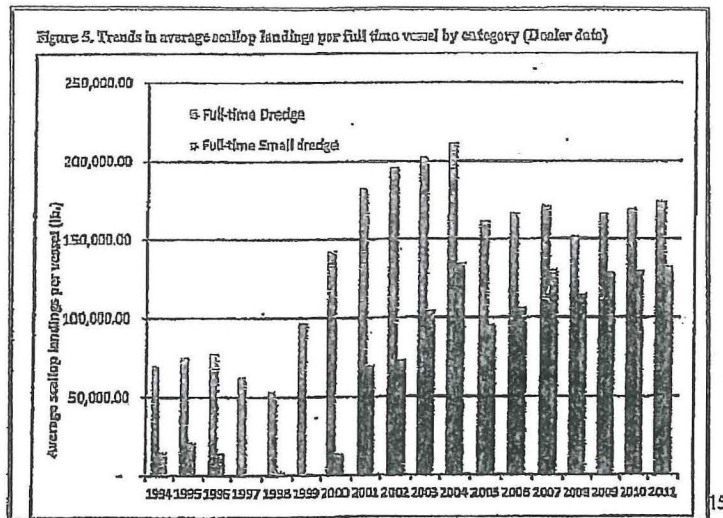

The objective of the Small Dredge Exemption Program was to protect and encourage a traditional fishery in the Gulf of Maine. However, only one [1] of fifty-three [53] full-time small dredge vessels remain in the Gulf of Maine. Furthermore, the objective that a smaller dredge and crew size will reduce the small dredge vessel's catch/production/landings is no longer valid.

¹² 16 U.S.C. §§ 1852, 1853(a)(15), and 1854.

¹³ *Oceana, Inc. v. Locke*, 831 F. Supp. 2d 95, 124 (D.D.C. 2011) citing 40 C.F.R. § 1502.14.

¹⁴ Scallop Plan Development Team Memorandum to Scallop Oversight Committee, dated September 1, 2004.

Full-time small dredge vessels catch approximately seventy percent [70%] or more of their full-time large dredge counterparts. The increase in small dredge vessel landings illustrated in the table below is a result of the implementation of the Access Area Program and subsequent increase in small dredge permit holders. *See Chart below.*

Proposed Framework 24 SAFE Report

In view of the foregoing and to comply with the intent and objectives of the Small Dredge Exemption Program, we recommend that the small dredge permit holders be exempted from participating in access area trips because the smaller dredge size does not effectively limit their total catch/production/landings. When the Small Dredge Exemption Program was created, the Council envisioned that the small dredge and limited crew will result in less than half of the landings of a large dredge and fully crewed vessel. Clearly the subsequently implemented Access Area Program, which allots small dredge vessels the same total landings as large dredge vessels and places no limit on crew size, violates the NEMF Council's intention and objective in creating the Small Dredge Exemption Program.

In the alternative, we recommend that the New England Fishery Management Council honor the Scallop Plan Development Team's recommendation and reevaluate the Scallop Dredge Exemption Program to determine whether the present system is achieving its original and intended objectives.

We trust the foregoing sufficiently responds to your request to our office. We look forward to the opportunity to discuss this matter with you further upon your return.

If we can provide you with any further evaluation or explanation, please do not hesitate to advise.

Very truly yours,

Thomas S. Muzyka

¹⁵ Proposed Framework 24 SAFE Report, *supra* at 8.

Feb. 7, 2013

Hi Paul,
on the tapes you heard Richard
Roe (R.A.) at the time, say the staff
would have to write for the Secretary's
review of the justification, rationalization
analysis of the Small Dredge program.

My request is a copy of this
justification, rationalization, analysis
the staff submitted to the Secretary;
also I would like a copy of the
analysis of the economic effects
the Small Dredge program would
have on the fishery.

Regards,
Ray Starvish

FAIRHAVEN-MA-02719

April 17, 2013

New England Fisheries Management Council
Attn: C.M. "Rip" Cunningham, Jr.
50 Water Street, Mill 2
Newburyport, MA 01950

Dear Chairman,

I am asking for The Council to consider a change in the way observer coverage is financed in the scallop fishery.

Please consider the following:

The scallop fishery is unique in that the vessel makes direct payments to the observer service provider. The vessel then needs to fish additional pounds or fractions of D.A.S. to recoup or offset the financial burden incurred by carrying the observer.

The reason for carrying observers is to accumulate data that is then used in the science to best manage the fishery.

In the past a vessel taking a late season closed area trip would find itself carrying an observer after the scallop observer set aside was exhausted with the vessel bearing the entire financial burden with no offset or compensation.

Presently we have access areas with very low catch rates. When a vessel is assigned an observer for one of these access areas, it becomes very stressful and burdensome to prolong the trip to catch the allocation and the observer compensation pounds. A trip limit of 13,000 lbs could take a single dredge vessel averaging 500 lbs a day a full 26 days or more to achieve its goal. As more vessels extract their trips, catch rates will drop further. A vessel must mobilize twice and perhaps three times as catch rates drop. An observer assignment to a trip that lasts 13 days will add four or more fishing days for the vessel to harvest its compensation pounds.

We typically limit our trips to eleven days for product quality reasons. For a vessel to harvest 13,000 lbs at a catch rate below 500 lbs a day presents fishing strategy logistic and financial problems.

Assume two 13 day trips at hopefully 500 lbs a day, then add four or more days to recoup observer costs and it becomes near impossible to successfully harvest and overcome costs associated with fishing an access area with low catch rates. Fuel costs, gear expenses, fixed overhead, wear and tear, all dictate that vessels must operate with maximum efficiency in today's economy. The condition of certain

cc: Council, DG (4/19)

access areas, combined with the vessels responsibility to the observer creates great inefficiencies and uncertainties for the vessel. If an observer is assigned to more than one segment of the trip the formula for success becomes even more impossible.

The scallop industry is experiencing severe cut backs in 2013 and 2014. In order to ease the burden of reduced fishing opportunities and maintain the viability of a healthy pro-active industry, I request a dialogue to address funding of the observer program.

The open area observer program may function well at the moment; however, the access area program doesn't and deserves a long-term solution to remove variables and uncertainties that affect the fleet.

The direction I would suggest is that in order to facilitate the gathering of data by observers for scientific inputs to fisheries management, the funding source needs to change. Let the fleet's set aside pounds be redistributed in annual fishing year specifications and have the funding for science (observers) be allocated from other sources intended for that purpose, such as S-K money.

I feel this is a consequence arising from unforeseen circumstances that have developed in our fishery. The scallop fishery and the scientific and regulatory communities all benefit from observer data but this data now comes at too high a cost. The scallop fleet has always been a willing partner in science and accumulation of data; however, carrying an observer can be viewed as a penalty in some access areas and before an aversion to willing participation develops, this could and deserves to be addressed.

Respectfully submitted,

Joseph J. Gilbert

November 7, 2013

E.F. "Terry" Stockwell III
Chairman
New England Fishery Management Council
50 Water Street
Newburyport, MA 01950

Dear Chairman Stockwell:

As the New England Fishery Management Council is poised to meet on November 20 to discuss priorities for the 2014 fishing year, I respectfully ask that the Council omit consideration of the single dredge permit exemption for the scallop fishery.

As you know, the prosperity of the scallop industry is vital to that of New Bedford, greatly contributing to \$400 million dollars in direct annual revenue and reaffirming New Bedford's position as the nation's highest grossing fishing port for thirteen consecutive years. There are approximately twenty single dredge vessels operating out of New Bedford, which employ around 75 to 100 employees. The elimination of this exemption would cause these vessels to cease operation and would incidentally inflict unnecessary negative financial impacts upon our fishermen, their families and the New Bedford fishing community.

I have heard repeated concerns from scallopers that the repeal of this exemption would adversely impact their livelihood and, thus, the economy of New Bedford. While proponents of this repeal assert that it would protect the scallop industry, the industry maintains that it would instead shift their profits from one group of vessels to another.

The successful management of our scallop fishery is a recognized model for the management efforts of other struggling fisheries. I respectfully urge you to forgo discussion of the elimination of this exemption as it will only diminish the confidence of our fishermen in this, currently, effectively and impartially managed fishery. Thank you for your full and fair consideration of this letter. I look forward to working closely on these initiatives moving forward.

Sincerely,

WILLIAM R. KEATING
Member of Congress

HERRING PRIORITIES

Ocean River
INSTITUTE

Protecting the Commons

*"All at last return
to the sea—to Oceanus,
the ocean river, like the
ever-flowing stream of
time, the beginning
and the end."*

— Rachel Carson,
The Sea Around Us

October 10, 2013

Dear Mr. Nies:

We urge NOAA Fisheries to approve efforts by both the New England and the Mid-Atlantic Fisheries Management Councils to establish federal management of river herring and shad in the formerly completely saltwater Atlantic mackerel and herring fisheries.

We urge establishment of strong annual catch caps, improved observer coverage, and a dramatic decrease in fish deaths as bycatch and at-sea-dumping, "slippage," of unobserved catches.

The Mid-Atlantic Council's Amendment 14 to the Mackerel, Squid, and Butterfish Fishery Management Plan and the New England Council's Amendment 5 to the Atlantic herring plan are worthy of your support in their entirety as developed by the Councils.

Designation adding river herring and shad to these two federal fishery management plans would enable more responsible management and stewardship by the Councils and NOAA Fisheries.

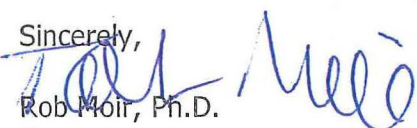

Designation would rebuild river herring and shad populations in four ways.

1. Gather better data and improve the population estimates of river herring and shad.
2. Coordinate with state and local efforts to restore river herring and shad.
3. Identify and protect habitats essential for river herring and shad.
4. Set science-based annual catch limits.

We strongly support taking these actions for both conservation of river herring and shad, and for sustainable seafood of these fish and of their predators. We must strive to leave Atlantic marine life better off than how we found it, if not for our enjoyment than for future generations.

Thank you for your consideration of our requests for responsible stewardship.

Sincerely,

Rob Moir, Ph.D.
Executive Director

If you kill off the aunts or uncles in a family, imagine how much smaller the bloodline would be in years to come. The same goes for fish, or any member of an ecosystem. There are no exceptions. You can't say, "Oh, it's OK. They are just a couple species." If you kill off one species, then you start to kill off other members of the ecosystem as well. If nothing else, it's simply math. Every species and family is necessary to our survival.

River herring and shad play a vital role in the ocean ecosystems. They feed many of the larger fish, birds, dolphins and whales. They also support the commercial fishing of larger, commercially valuable fish like cod, striped bass and tuna. The health of the ocean ecosystem depends on these forage fish.

On average, 90% of all marine fisheries have already been depleted. If we do not make a serious effort to establish a long term management program, we stand to lose the little we have left. If these fisheries collapse, the economic losses (like the cod collapse in Canada) might hit the US hard. We will not only lose a natural resource, but also pay a heavy financial toll for it as well.

Due to overfishing and pollution, the local fishermen that I became friends with a dozen years ago are no longer fishermen. There are no fish to catch. The fishermen who are still around are struggling to make their way in other employment. Obviously, if there are no fish to catch locally, there are no fish to market locally to wholesalers and restaurants. Other local businesses have therefore suffered, too. There is no reason whatsoever to allow the replication of this Indian River estuary/Atlantic Ocean disaster. Altruism remains a job requirement for every public servant. Act in good faith or find the nearest exit.

Susan Chandler
3008 N 25th St
Fort Pierce, FL 34946

As I hope you know and understand, all life is interdependent. We need to cease being so greedy that we overfish, as we overharvest timber and use seeds that need specific fertilizers that pollute our river systems. It makes no sense to continue these self-defeating practices when we know better.

All wildlife and fish are important. Once a
species is almost depleted, it takes years
for it to come back. The generations of
people to follow expect and deserve no
less from us.

Patricia Dehler
1204 28th Ave W, Apt C
Palmetto, FL 34221

Ecosystem-based management of fish like
shad and river herring, because *all*
animals, whether mammals, fish or even
insects affect people each other and plant
life. If one type of animal is killed off or
harmed, those other animals, plants and
insects that they eat grow out of control.
Secondly, both of these types of fish are
useful to human beings for food. Wasteful
dumping and/or over-killing is not only
wrong, but also very irresponsible.

Karen Atkinson
1126 Grace Ave.
Panama City, FL 32401

It is obvious that these fish are a hugely
necessary component of our overall
ecology and food chain.

We need better control measures for the
overfishing of species in the wild.
Companies have a habit of dumping dead
fish into the areas where they've been
caught so that the fisherman don't go over
the limit. This kind of behavior needs to be
stopped.

Michael Hood
6115 N Davis Highway, Unit 59B
Pensacola, FL 32504

Joanna Rogers
522 Amber Street
Pensacola, FL 32503

We are killing this planet because we are so numerous and ravenous. We are living in an unsustainable manner. This planet is very bountiful and provides us with plenty of food, clean water, and clean air. But since we are quickly depleting our food, polluting our water and air, and thus destroying the living ecosystems that provide us with these things for free, we are literally "killing the goose that laid the golden egg."

Benjamin Joannou Jr
6401 SW 134 Drive
Pinecrest, FL 33156-7046

David Gregersen
8956 59th Street N

These fish are bedrock species to our fisheries, so why deplete and destroy them? Our founding fisheries emanated from these stocks. Wake up and do the right thing!!

Cynthia Disanto
2134 SE N Blackwell
Port St. Lucie, FL 34952

I formerly lived in Sitka, AK, and am very aware of the devastating effect that improperly managed fishery regulations can have. The only truly acceptable means of managing a fishery absolutely MUST include an ecological approach, considering inflows, # of fishermen/boats, limits on commercial AND recreational harvests, seasonal conditions, streamside environment, and other species relying on the fish for their own food supply. The resource is ours to use, not abuse, and humans are far from the only users. The sooner we recognize this and protect future stocks and the welfare of other creatures, the better off we will be.

Donna Selquist

10530 SW Waterway Lane
Port St. Lucie, FL 34987

We as a people, are killing our fellow inhabitants. We have no right. We need to respect all of earth's creatures and stop the belief that they don't matter. Every living thing on earth depends on another for survival. Stop killing our oceans!

Without a balanced marine ecosystem, we are doomed. "The last word in ignorance is the man who says of an animal or plant, "What good is it?" If the mechanism as a whole is good, then every part is good, whether we understand it or not. If the biota, in the course of aeons, has built something . . . who but a fool would discard seemingly useless parts? To keep every cog and wheel is the first precaution of intelligent tinkering." — Aldo Leopold

With dwindling natural resources and the
criminal behavior of Corporations,
whether oil, gas, or fishery corporations;
the idea of "get rich quick" is the mantra
for the greedy, ignoring the day when the
sea, rivers, oceans, will be dead, along with
the fish. What will corporations (not
people) and consumers do then? It is
critical that the billions of people on planet
recognize, especially corporations, that
when the natural resources are gone, we
won't be around much longer either. We
must all be more thoughtful and caring.

For nearly 50 years I've lived near the Herring River in Harwich, Cape Cod, where I've seen the river fish disappearing dramatically. Friends who fish for a living say they're not seeing the herring and shad at sea. Because they know forage fish are the foundations of the whole ocean food-chain, they're willing to submit to any plan that will save these fish and save their fishery. Why is there no working plan for the north Atlantic similar to that which is effecting the recovery of West coast fisheries?

When we upset the ecosystem, we affect
ourselves along with the wildlife that lives
there. An ecosystem-based approach to
fish management ensures that river
herring and shad populations are allowed
to rebuild. This is important not only for
the conservation of these fish, but for the
sustainability of the entire ecosystem
which we share.

As any competent fisheries biologist must know, anadromous clupeids are philopatric spawners; they return to the river of their birth to reproduce. Seiners and trawlers that take them offshore can easily exterminate the entire spawning cohort of one or more watersheds, leaving

the alewives or shad extinct in those watersheds. This simply must be forbidden. When, in the 1950s, MA seiners discovered the offshore "hotspots" where anadromous and pelagic clupeids congregated before the anadromous species peeled off for their natal waters, they raised the annual catch from 4-5 million pounds (caught inshore in weirs and pounds) to over 35 million pounds. Within a decade the offshore catch had declined to 3-4 million pounds, and the inshore catch was nil. I can send you the graphs and data if you wish--it's all from government sources.

Bellerose, NY 11426

As a retired teacher of Earth Science, I am aware of the Balance in Nature. I also remember the commercial that warned us - IT'S NOT NICE TO MESS WITH MOTHER NATURE! Do you remember what happened to the man who did?

Sister Anne Michel
St. Joseph Convent, 1725 Brentwood Rd
Brentwood, NY 11717-5543

Nicholas Prychodko
PO Box 2138
Bridgehampton, NY 11932

River herring and shad play a vital role in the coastal and ocean ecosystems. They feed many of the larger fish, birds, dolphins and whales. They also support the commercial fishing of larger, commercially valuable fish like cod, striped bass and tuna. The health of the ocean ecosystem depends on these forage fish.

River herring and shad have all too often
been overlooked, with the focus directed
on ocean fish like mackerel and salt-water
herring. Yet these fish, too, are critical to
the global food chain (including human).
Catch caps and monitoring would go far to
protect these valuable fish, as would
adding coverage for them to Amendments
5 and 14. Your consideration is most
appreciated.

I do not have to tell you why it is important to take an Ecosystem approach...you already know that. If you do not you have the wrong job. We must preserve our environment for future generations unless of course you have another agenda? Allowing BIG Corpora to take over our environment for profit maybe? That is totally unacceptable! Every one of us needs to stop this! ASAP! I am a 68 year old Grandmother. And I love this beautiful country..not so much those running it. We need to stay at home and fix what is wrong and stop the damn WARS that kill and maim innocents and anything else that gets in the way of the nasty O'USA! Start healing and mending and stop hurtin and killin!!! AND starving! There are people starving in my own country and millionaires getting richer everyday! What kind of way is that to run a civilized society? Stopping the environmental assault is a beginning to set things right...

My preference is that wildlife of any form should be allowed to exist for its own sake, as opposed to being seen as food to be harvested. Hunting and fishing to the brink of extinction is not something that appeals to me. To that extent, I am a supporter of all attempts to safeguard environments and to put in hunting/fishing limits to sustain healthy water and ground-based forms of wildlife.

Reston, VA 20191

My Dad and sister and I caught river Herring as a kid to salt to relive a Richmond Tradition in the 1970's. There were so many you could catch 18 in one scoop. The city has come to realize that the River Herring support a Great Blue Heron Rookery and walks are given in the Spring to see the Great Blue Herons eating the fish and nesting. Other Richmonders fish for Rockfish in Downtown Richmond which eat the Herring. Bald Eagles also feed on the herring, as well as our winter Ring-billed Gulls.

James Shelton
811 Roehampton Ct
Richmond, VA 23236

No species can be sustained when not kept within an ecosystem-based approach to management. Not only will the river herring and shad be lost, but those who drove them to that end will destroy their own way of making a living. For their own sake, they should not ignore the ecosystem approach to management.

At some point, we all have to learn to
respect the species with which we share
the planet. We must learn to care about
their lives and their continued presence on
the planet. If we do not, yours and my
great great grandchildren may not have an
earth to enjoy, or it will be so devastated
by our foolish waste that it will hardly be a
life worth living. We have a short time to
work with this. Taking care of river
herring and shad is just one small step
that will add to what we all hope will be a
world that sustains all life--all life

Mr. Terry Stockwell, Chairman
New England Fishery Management Council

Mr. Doug Grout, Chair
Herring Oversight Committee

50 Water Street, Mill 2
Newburyport, MA 01950

RE: Priorities for the Atlantic Herring Fishery for 2014

Dear Chairmen Stockwell and Grout:

The Ad Hoc Pelagics Coalition is a new Gloucester-based organization comprised of mid-water trawl operators Irish Venture, Inc., owner of F/V *Western Venture* and F/V *Osprey*, and Western Sea Fishing Company, owner of F/V *Challenger* and F/V *Endeavour*, along with Cape Seafoods, Inc., a herring seafood processing company. All are long-time participants in the Atlantic herring fishery. The Coalition offers the following comments relevant to the discussion of herring priorities and other issues likely to arise at the New England Council's upcoming meeting in Newport, Rhode Island.

We understand the Herring Oversight Committee's position that the only herring management priorities for next year should be to address disapproved elements of Amendment 5 and action on monitoring. These are important, complex, and controversial actions in which the Coalition looks forward to participating. Undoubtedly, addressing these two matters will require significant staff and Council resources. There is an additional issue, however, that is not nearly so difficult to tackle, which we urge the Council to also address in the upcoming year.

Specifically, we are requesting expedited action to lift the annual closure of herring Management Area 1B from January through April. The Coalition believes this measure, included in recently implemented Framework 2, was an over-reaction to an unusual confluence of events in 2012, as explained below, and fails to recognize the relatively unpredictable nature of the herring stock distribution from year to year. Notably, this year, through October 26, only 44 percent of the Area 1B total allowable catch ("TAC") has been harvested.

This seasonal closure was primarily driven by the experience in 2012 when the convergence of a very low TAC in Area 1B (2,723 mt)¹ and an unusually large biomass of herring overlapping Areas 1B and 2, persisting there from November 2011 through the winter of

¹ As you will recall, the 2012 Area 1B sub-TAC was reduced by 1,639 mt (from 4,362 to 2,723) to account for an overage in the 2010 fishing year. Parenthetically, the 2012 overage was 1,555 mt, somewhat less than the 2012 area 1B TAC adjustment.

2012, led to both early closures of and overages in each of these areas. For Area 1B, in percentage terms, the overage was significant, 57 percent.² Notably, these factors also led to the first in-season closure of Area 2. By the end of February 2012, 104 percent of that year's Area 2 TAC had been harvested. 2012 was the first year that the allocations for Areas 2 and 3 had ever been fully utilized (and, indeed, exceeded), although the percentage of TAC harvested has been increasing as allowable harvest levels were steadily decreased and herring biomass grew.

As a result of these factors, the Council considered, and ultimately adopted, options for seasonal splits for Areas 1B, 2, and 3. While the Coalition supported the concept of seasonal allocations, it opposes the "zero allocation" of herring TAC in Area 1B from January to April, or any seasonal allocation for this area. The reason for this is, as the Council recognized in Framework 2, fishing occurs in this area year-round³ and winter is often a key time for herring fishing in Area 1B. While ideally fishing in all areas would occur year round, the fact is that predicting the time of year herring will be available in a particular area is impossible. The experience with this year's Area 1B fishery amply demonstrates the point.

An additional concern with limiting the Area 1B fishery to only the latter nine months of the year is that only a fraction of the harvest can be rolled over into the next fishing year when it is not fully utilized. By contrast, if all or a substantial portion of the TAC is allocated to winter season, unused quota is available later in the year.

Finally, we note that one of the stated purposes of the seasonal split was to "slow fishing effort by spreading it through the year, reducing the probability that the entire sub-ACL would be caught early in the fishing year."⁴ While that is a worthy objective – assuming that sufficient fishing opportunities exist later in the year – having a zero allocation for the first four months runs counter to this objective. The TAC has not been "spread through the year" but rather entirely prohibited in the year's first quarter.

As a result, the Coalition respectfully requests the Council either eschew the seasonal split for Area 1B entirely, as it did for Areas 2 and 3; or that it allocate a sufficiently high percentage, on the order of 75 percent, to the January to April season. The TAC for this area over the next two years is sufficiently high so that monitoring should not be an issue. Overages are unlikely because of other actions the Council included in Framework 2. Enacting this change can be quickly accomplished and will help the industry achieve optimum yield throughout Atlantic herring's range.

The only other issue we wish to raise is the motion that was tabled at the Council's September meeting to prohibit mid-water trawl gear in federal waters until 100 percent observer

² The overall herring TAC in 2012 was exceeded only by 3 percent. This was only year since the inception of quota management that the overall quota has been exceeded. Not coincidentally, the total TAC for 2012 was the lowest ever allocated.

³ See NEFMC, Framework Adjustment 2 to the Atlantic Herring Fishery Management Plan (FMP) AND Proposed Atlantic Herring Fishery Specifications for the 2013-2015 Fishing Years (January 1, 2013 – December 31, 2015) § 3.5.1.2.3, at 120 (July 2, 2013) ("Area 1B is used throughout the year.")

⁴ 78 Fed. Reg. 61828, 61832 (Oct. 4, 2013).

November 4, 2013

Page 3

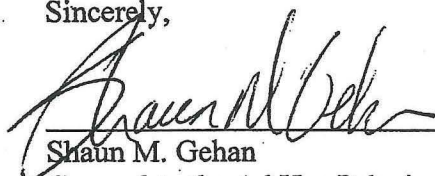

coverage can be implemented. We understand that Mr. Dempsey, the motion's maker, intends to move to take this motion off the table at the meeting later this month.

It would be our hope that, if this occurs, the motion is taken off the table and soundly defeated. There is no reason in law or policy to ban the small mid-water trawl fleet. As the Council has been repeatedly advised by the National Marine Fisheries Service ("NMFS") and scientific staff, there is no justification for 100 percent observer coverage. That said, recognizing the Council has expressed its opinion on this point, it would be unfair and contrary to law to punish this sector of the fishery for decisions made by NMFS. It would also be the final blow to Gloucester as a fishing port.

It is our sincere hope that as Amendment 3 moves forward, the Council recognizes that the few mid-water trawl vessels involved in the herring and mackerel fisheries operate the "cleanest" fishery in the Northeast Region. This sector has been under a microscope for years, and yet both at-sea and shore side monitoring continue to show that bycatch accounts, at the most conservative end of the range, for less than two percent of the total catch. Why anyone feels this fishery deserves to be even the subject of a motion such as this is beyond reckoning. Whatever the reason, it is not rooted in letter, purpose, or spirit of the Magnuson-Stevens Act.

Thank you very much for your attention to these comments. The Ad Hoc Pelagics Coalition looks for to continuing to work with Council on these and other import issues related to the herring fishery over the coming years.

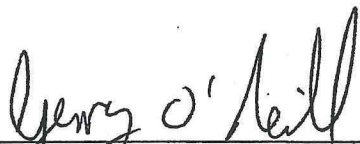

Sincerely,

Shaun M. Gehan

UNITED STATES DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
NATIONAL MARINE FISHERIES SERVICE
NORTHEAST REGION
55 Great Republic Drive
Gloucester, MA 01930-2276

AUG 31 2012

C.M. "Rip" Cunningham, Jr., Chairman
New England Fishery Management Council
50 Water Street
Newburyport, MA 01950

Dear Rip:

On August 2, 2012, the United States District Court for the District of Columbia issued a remedial order in the civil action Flaherty, et al. v. Blank, et al., Case No. 11-660. The Court ordered remedial action to address deficiencies identified by the Court with respect to Amendment 4 to the Atlantic Herring Fishery Management Plan (FMP), including the Court's findings that:

- NOAA Fisheries Service (NMFS) did not satisfy its obligation to independently determine whether Amendment 4's definition of "stocks in the fishery" complied with the Magnuson-Stevens Fishery Conservation and Management Act (MSA);
- NMFS did not adequately consider whether Amendment 4 complied with National Standard 9's requirement to minimize bycatch to the extent practicable; and
- NMFS violated the National Environmental Policy Act (NEPA) by failing to consider the environmental impacts of a reasonable range of alternatives for the acceptable biological catch (ABC) control rule, accountability measures (AMs), and measures for minimizing bycatch.

Consistent with the Court's remedial order, I recommend the New England Fishery Management Council (NEFMC) consider, in an amendment to the Atlantic Herring FMP, whether river herring (alewife and blueback) and shad (American and hickory) should be designated as stocks in the Atlantic herring fishery. The NEFMC's consideration should be based on, at a minimum, the following:

- The MSA requirements, described below, related to including a stock in an FMP;
- The 2012 Atlantic States Marine Fisheries Commission (ASMFC) river herring stock assessment report and peer review report;
- NMFS's 2011 finding that listing river herring as a threatened species under the Endangered Species Act may be warranted;
- The 2007 shad stock assessment report and its peer review report;
- Alternative Set 9 in the Mid-Atlantic Fishery Management Council's (MAFMC's) Amendment 14 to the Atlantic Mackerel, Squid, and Butterfish (MSB) FMP; and
- The Court's March 8, 2012, summary judgment opinion.

Under the MSA, each Fishery Management Council is required to develop FMPs “for each fishery under its authority that requires conservation and management.” 16 U.S.C. § 1852(h)(1). A “fishery” is defined as “one or more stocks of fish that can be treated as a unit for purposes of conservation and management and that are identified on the basis of geographic, scientific, technical, recreational, and economic characteristics.” *Id.* § 1802(13).

Section 303(a)(2) of the MSA requires each FMP contain, among other things, a description of the species of fish involved in the fishery. *Id.* § 1853(a)(2). The National Standard 1 Guidelines provide further guidance that in setting forth this description, Councils should determine “which specific target stocks and/or non-target stocks to include in the fishery,” as well as whether it would be appropriate to designate any “ecosystem component species.” 50 C.F.R. § 600.310(d)(1). FMPs must include reference points (including, *inter alia*, status determination criteria, maximum sustainable yield, acceptable biological catch, and annual catch limits) and management measures (including accountability measures) for every stock “in the fishery.” *Id.* § 600.310(d)(2); see also § 600.310(b)(2) (describing reference points and management measures required by the MSA).

In considering which stocks “can be treated as a unit for purposes of conservation and management,” and therefore constitute a “fishery,” councils should remain mindful of National Standard 3’s requirement that, “[t]o the extent practicable, an individual stock of fish shall be managed as a unit throughout its range, and interrelated stocks of fish shall be managed as a unit or in close coordination.” 16 U.S.C. § 1851(a)(3). The National Standard 3 Guidelines further instruct that the choice of a management unit “depends on the focus of the FMP’s objectives, and may be organized around biological, geographic, economic, technical, social, or ecological perspectives.” 50 C.F.R. § 600.320(d)(1).

If a stock in a fishery is determined to be overfished or subject to overfishing, it must be included in an FMP. See 16 U.S.C. § 1853(a)(1)(A) (FMPs must provide measures to prevent overfishing and rebuild overfished stocks). For all other stocks, the National Standard 7 Guidelines provide that the following criteria should be considered in determining whether a fishery is in need of conservation and management through regulations implementing an FMP:

- (i) The importance of the fishery to the nation and the regional economy;
- (ii) The condition of the stock and whether an FMP can improve or maintain that condition;
- (iii) The extent to which the fishery could be or is already adequately managed by states, by state/federal programs, by federal regulations pursuant to FMPs or by industry self-regulation, consistent with MSA policies and standards;
- (iv) The need to resolve competing interests and conflicts among user groups and whether an FMP can further that resolution;
- (v) The economic condition of a fishery and whether an FMP can produce more efficient utilization;
- (vi) The needs of a developing fishery, and whether an FMP can foster orderly growth; and
- (vii) The costs associated with an FMP, balanced against the benefits. 50 C.F.R. § 600.340(b)(2).

At its June 2012 meeting, the MAFMC adopted a motion to consider designating river herring and shad as stocks in the fishery in Amendment 15 to the MSB FMP. MAFMC staff indicated that development of Amendment 15 is scheduled to begin in September 2012. MAFMC staff's current draft timeline projects that the MAFMC will take final action on this amendment in April 2014, NMFS will publish a proposed rule in July 2014 and a final rule in December 2014, and implementation of the amendment will occur in January 2015.

I encourage the NEFMC to collaborate with the MAFMC, as well as the ASMFC, on its consideration of the need for federal conservation and management of river herring and shad. River herring and shad have unique management challenges because they are anadromous and range along the entire east coast of the United States. The consideration of federal management for river herring and shad is an opportunity to engage management partners and stakeholders to thoughtfully evaluate holistic management of these species.

Consistent with the Court's remedial order, I recommend the NEFMC consider, as part of the 2013-2015 Atlantic herring specifications, a range of alternatives for the Atlantic herring ABC control rule and AMs. The final rule for Amendment 4 (76 FR 11373, March 2, 2011), explained that, if a new ABC control rule could be developed following the 2012 Atlantic herring benchmark stock assessment, it would be developed in the 2013-2015 Atlantic herring specifications. The Court's remedial order stated that at least one of the alternatives to the ABC control rule should be based on the best available science regarding ABC control rules for forage fish. The 2012 Atlantic herring stock assessment included a thorough consideration of the role of Atlantic herring as forage and increased the estimate of Atlantic herring natural mortality to account for consumption of Atlantic herring by predators. The NEFMC's Science and Statistical Committee (SSC) is scheduled to meet on September 4, 2012, to review the 2012 Atlantic herring benchmark stock assessment and develop Atlantic herring ABC recommendations for 2013-2015. I believe it would be appropriate, and consistent with the Court's remedial order, for the SSC to consider a range of alternatives for the Atlantic herring ABC control rule at its upcoming meeting, as previously planned, and for that range of alternatives to be analyzed in the 2013-2015 specifications.

Atlantic herring regulations authorize the modification of existing Atlantic herring AMs through the specification process (50 C.F.R. § 648.200(g)). Consistent with these regulations, and the Court's remedial order, I believe it would be appropriate for the 2013-2015 Atlantic herring specifications to consider a range of alternatives to modify existing Atlantic herring AMs. If during the specification process a new Atlantic herring AM is identified, implementation of that new AM could be considered in a future framework or amendment.

NMFS is also ordered to recommend to the NEFMC that it consider a range of alternatives for minimizing bycatch in the Atlantic herring fishery, to the extent practicable. Amendment 5 to the Atlantic Herring FMP considers a range of alternatives to minimize bycatch. Therefore, Amendment 5 should explain why the range of alternatives considered in Amendment 5 was reasonable and how measures adopted by the NEFMC as part of Amendment 5 minimize bycatch, to the extent practicable, in the Atlantic herring fishery.

Additionally, NMFS is ordered to file with the Court a report describing all remedial actions by August 2, 2013. This report is to include the status of the NEFMC's consideration of designating river herring and shad as stocks in the Atlantic herring fishery and the completed NEPA analyses for the 2013-2015 herring specifications and Amendment 5. Lastly, the Court has retained jurisdiction over this case pending full compliance with its order.

For the purposes of complying with the Court's remedial order, an environmental assessment would be considered complete when the finding of no significant impact (FONSI) is signed by NMFS. Additionally, an environmental impact statement (EIS) would be considered complete when the notice of availability (NOA) for the final EIS is published in the *Federal Register*. Both of these actions typically occur prior to publishing the final rule in the *Federal Register*.

Council staff has indicated to us that Amendment 5, and its final EIS, will be submitted to NMFS for review and approval in the near future. Submitting Amendment 5 to us soon would provide NMFS with adequate time to consider amendment approval, complete a rulemaking, and allow for the NOA for the final EIS to be published prior to August 2013. The NEFMC is currently scheduled to take final action on the 2013-2015 Atlantic herring specifications at its November 2012 meeting. I recommend that the NEFMC proceed as scheduled, thereby providing adequate time to complete a NEPA analysis for the herring specifications by August 2013.

I appreciate the time and effort that the NEFMC has put into the Atlantic Herring FMP, and I look forward to working with the NEFMC to address these important issues in the Atlantic herring fishery. Please contact George Darcy if you have any questions.

Sincerely,

John K. Bullard
Regional Administrator

Enclosure (March 2012 opinion on summary judgment; August 2012 remedial order; letter to MAFMC regarding Amendment 14 to the MSB FMP)

cc: Rick Robins

UNITED STATES DEPARTMENT OF COMMERCE

Gloucester, MA 01930-2276

AUG 29 2013

Ernest F. Stockwell, III, Acting Chairman
New England Fishery Management Council
50 Water Street
Newburyport, MA 01950

Dear Terry:

I am writing to follow up on my August 31, 2012, letter regarding the District Court's August 2, 2012, remedial order in *Flaherty v. Locke*, No. 11-660 (D.D.C.), a case challenging Amendment 4 to the Atlantic Herring Fishery Management Plan (FMP).

In that letter, I described the District Court's March 2012 opinion finding that the National Marine Fisheries Service (NMFS) had not complied with: Magnuson-Stevens Fishery Conservation and Management Act (MSA) provisions concerning stocks in the fishery and minimizing bycatch; and the National Environmental Policy Act (NEPA) requirement to consider a reasonable range of alternatives for Amendment 4's accountability measures (AMs), acceptable biological catch (ABC) control rule, and measures to minimize bycatch. I further described the remedial actions the District Court ordered NMFS to take.

NMFS has completed all but two of the actions ordered by the District Court. The two remaining actions are:

- (1) Filing with the District Court a report of all remedial actions taken, including a completed NEPA analysis for the 2013-15 herring specifications and management measures for the Atlantic herring fishery analyzing a range of alternatives to the current AMs and the ABC control rule for herring, including consideration of control rules for other forage fish; and
- (2) Filing with the District Court a supplemental explanation setting forth NMFS's consideration of whether the Atlantic Herring FMP minimizes bycatch to the extent practicable in compliance with the MSA.

On July 26, 2013, the District Court granted NMFS an extension until October 23, 2013, to complete these two remaining actions. NMFS expects the District Court to scrutinize the agency's compliance with the August 2, 2012, remedial order closely.

Additionally, during this lawsuit and development of Amendment 5, stakeholders have raised concerns that the Council can address. Although not required by the District Court's August 2, 2012, order, the Council can take steps to improve management of the herring fishery through: Development of an amendment to consider river herring and shad as stocks in the herring

cc: CBR, LS (9/6)

fishery; development of an amendment to further consider alternative ABC control rules for herring, including consideration of control rules for other forage fish; and completion of Framework 3 considering catch caps for river herring and shad. I strongly urge the Council to take the following actions as soon as possible:

(1) Develop an amendment to consider river herring and shad as stocks in the herring fishery, consistent with the recommendation in my August 31, 2012, letter, and with the Council's 2013 priority list.

(2) Further consider alternative ABC control rules for herring, including control rules for other forage fish, based on the best available science. This is consistent with the recommendations of the Scientific and Statistical Committee and Herring Plan Development Team calling for comprehensive consideration of managing herring as a forage fish as part of the long-term management strategy for herring. I recommend that the Council begin considering this issue in an amendment prior to development of the 2016-18 herring specifications. This action could be combined with the amendment to consider river herring and shad as stocks in the herring fishery.

(3) Complete the Council's consideration of the river herring/shad catch cap action in Framework 3.

I appreciate the hard work that you and your staff have put into improving management of the herring fishery, and I look forward to continuing these efforts together. Please contact me if you have any questions.

Sincerely,

John K. Bullard
Regional Administrator

 Charlottesville, VA 22901

Dear Dr. O'Brien:

Thank you for your letter regarding protection of river herring and the recent Mid-Atlantic Fishery Management Council decision regarding management of these important species.

I believe that we have similar concerns and goals for river herring and shad. NOAA has invested millions of dollars in improving habitats in rivers up and down the coast, working with many partners who leverage our dollars and staff time. I have argued forcefully and voted for meaningful catch caps on the herring and mackerel fleets. We look forward to working with the Councils, the Atlantic States Marine Fisheries Commission, and organizations including and similar to yours, to evaluate river herring and shad resources, more completely understand the threats to those resources, and develop ways to minimize the impacts of those threats. We may differ on how to get there, but our actions and investments demonstrate that we are headed in the same direction. I do not consider this effort as "kicking the can down the road" but, rather, it is an effort to fully evaluate the threats to river herring and shad and determine the best way to minimize those threats without duplicating the efforts of the agencies, organizations, and individuals that are already involved and have management measures and restoration plans in place. Finally, I assure you that doing hard work to manage our fisheries and being part of difficult and very controversial decisions is our job, we welcome it, and these challenges do not cause me to vote in favor of the easy way out.

If you have any additional questions or concerns, please do not hesitate to contact us.

Sincerely,

 for John K. Bullard
 Regional Administrator

Mr. John K. Bullard, Regional Administrator
NOAA/NMFS for Sustainable Fisheries
55 Great Republic Drive
Gloucester, MA 01930

Dear Mr. Bullard,

I write to you as a citizen and dedicated recreational angler. Further, I write to take you to task for one of your votes at the recent Mid-Atlantic Fisheries Management Council (MAFMC) meeting in Philadelphia. I am a sportsman who is committed to sustainable and healthy fisheries. From an entire ecosystem perspective, any fishery only remains sustainable when the species at all trophic levels are abundant and healthy. Unfortunately, many of our nation's fisheries are depleted and in some cases, nearing the tipping point.

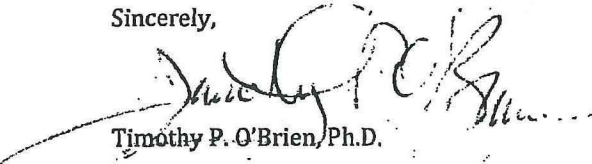

Every state government of the states that comprise the MAFMC have adopted regulations concerning River Herring and Shad (RH/S) because of the species' depleted condition. Over the past few months, a diverse group of stakeholders provided public comment (more than 37,000) and testimony at the meeting in favor of proceeding with a comprehensive analysis for full federal conservation and management in the Exclusive Economic Zone of the United States (EEZ). Quite frankly, the message could not have been presented more clearly.

In a 10-9 vote, in effect you cast the deciding vote that stopped any action calling for a Draft Environmental Impact Statement (D.E.I.S.) for Amendment 15 to incorporate RH/S into the mackerel, squid, butterfish plan. Instead, the MAFMC passed a motion that will attempt to create a working group and kick the federal management decision down the road at least three more years.

I find it troubling that as a Regional Administrator for the agency, which would be tasked with executing the D.E.I.S. that you would cast such a vote. While it may have been reasonable for you to offer the extensive comment you did against the motion (albeit deficient comment which did not in any way address NOAA's legal obligation to include these stocks in an FMP), I believe you should have recused yourself from the actual decision-making process. Ultimately, your vote could have been influenced because you just did not want to do the work or influence exerted upon you by commercial interests.

In the end, like so many other issues that involve the National Government, "the can has been kicked down the proverbial road" and nothing will be resolved. What a shame!

Sincerely,

Timothy P. O'Brien, Ph.D.

EkOngKar Singh Khalsa, Executive Director
 Mystic River Watershed Association
 20 Academy Street, Suite 306
 Arlington, MA 02476-6401

Dear Mr. Khalsa:

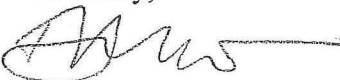

Thank you for your letter regarding protection of river herring. I commend you, your organization, and its supporters for the work that you have done to protect and improve this important waterway and the resources it sustains.

I appreciate your interest in our and the New England Fishery Management Council's work to manage the herring fishery and minimize catch of river herring in that fishery. The Mid-Atlantic Fishery Management Council is doing similar work on its Mackerel, Squid, and Butterfish Fishery Management Plan. We disapproved the observer coverage and slippage cap measures in Amendment 5 to the Atlantic Herring Fishery Management Plan because they were not legal. However, we have offered both the New England and Mid-Atlantic Fishery Management Councils a way to expand observer coverage with industry covering the at-sea portion of the cost in a way that complies with legal and budget realities. We retained the prohibition on net slippage as part of Amendment 5, but we have also advised the New England Fishery Management Council that we can help devise a way to deter such events with measures that accommodate safety concerns and more fairly address slippage events. We agree that these measures are important, and we are eager to help the New England Fishery Management Council find workable and legally sufficient solutions for the near future.

Finally, we share your concerns for river herring. I have argued forcefully and voted for meaningful catch caps on the herring and mackerel fleets. NOAA has invested millions of dollars in improving habitats in rivers up and down the coast, working with many partners who leverage our dollars and staff time. We look forward to working with the Councils, the Atlantic States Marine Fisheries Commission, and organizations including and similar to yours, to evaluate river herring and shad resources, more completely understand the threats to those resources, and develop ways to minimize the impacts of those threats. So we share the goals that your organization is working toward. We may differ on how to get there, but our actions and investments demonstrate that we are headed in the same direction.

If you have any additional questions or concerns, please do not hesitate to contact us.

Sincerely,

 for John K. Bullard

Newburyport, MA 01950

Dear Mr. Bullard and Mr. Nies:

The Mystic River Watershed Association (MyRWA) is a grassroots organization dedicated to the protection and restoration of the Mystic River, its tributaries and related natural resources throughout the watershed's 22 communities. Declining river herring populations in our watershed and throughout our region have been well documented. Several factors have been cited: dams, pollution and fishing by midwater trawling methods and vessels where river herring are caught in very high numbers as bycatch.

Regarding the first two factors, within our Mystic River Watershed, improvements have and are being made. The rebuilding of the dam that separates our Upper and Lower Mystic Lakes enabled the construction of a fish ladder. For the first time in over a century, river herring now have renewed access to former upstream spawning grounds. Also, during the last two years our organization has been conducting river herring habitat assessments seeking to expand suitable tributaries for this species to spawn. Additionally, the Massachusetts Water Resources Authority (MWRA) working with the City of Cambridge as well as other governmental and private organizations this year completed the construction of a wetland in Cambridge for the treating of stormwater runoff. This wetland will reduce the discharge of pollutants into Alewife Brook, an important herring spawning area.

In addition to this work, the Mystic River Watershed has been carefully following the New England Fishery Management Council's efforts to improve catch monitoring and address bycatch in the Atlantic herring fishery, including the development of protective measures for river herring at sea. We have attended meetings of the Council, its Herring Oversight Committee and advisory panels, and we also provided testimony at several public hearings. We were pleased that the Council developed and approved a strong set of monitoring and bycatch reduction reforms that struck a balance between the protection for river herring and a sustainable viable fishing fleet.

The Mystic River Watershed is extremely disappointed by NOAA fisheries' rejection of 100% observer coverage for midwater trawlers, the slippage caps, and the requirement to accurately weigh all landed catch. While attending the Gloucester Public Hearing for Atlantic Herring on May 31, 2012, we personally heard strong support for 100% observer coverage from representatives of the midwater trawl industry. As 100% observer coverage is needed for maintaining an effective catch cap it is very reasonable to require the fishing vessels to pay or find a solution to sharing costs. This would be similar to how the costs for observers are covered in the west coast groundfish fishery.

Equally concerning is the disapproval of the slippage cap/trip termination measures developed to deter dumping of unmonitored catch and the requirements for dealers to accurately weigh all catch. Without these measures, your ability to effectively monitor and reduce bycatch of river herring is greatly diminished.

The Mystic River Watershed has been doing its part to support a healthy river herring population. We are now asking that NMFS and the Council work together and fix these measures ASAP so what can be put into place is an effective policy to protect our river herring at sea. Additionally, we urge you to continue to develop and implement a cap that effectively **reduces** the amount of river herring that can be caught at sea.

Sincerely,

EkOngKar Singh Khalsa, Executive Director

Re: 2014 NEFMC Management priorities

Dear Tom,

I am writing on behalf of CHOIR to comment on the 2014 Council priorities. CHOIR is an industry coalition made up of over 650 commercial and recreational fishing organizations, fishing and shore side businesses, researchers and eco-tourism companies.

Herring

It is imperative that the Council works with NMFS to revise and implement Amendment 5. Such a revision would be focused on ensuring that the key measures disapproved by NMFS—100% industry-funded observer coverage, slippage caps, and catch weighing—are included in the final document. The Council, NMFS and a wide range of stakeholders worked for many years to craft these measures and it is vital that they are part of the eventual final rule. Therefore, this must be prioritized. In fact, finding a way to fix Amendment 5 and get it on the water should be one of the Council's top priorities in general, as it is fundamental to ensuring the rest of the Council-managed stocks are healthy.

And while we commented on this in our herring-specific comment, we also encourage the Council to pursue emergency action to ban midwater trawl gear until these revisions are made and the rules are implemented. If this must be included as priority, we support such a move.

Lastly, the Council should prioritize an action to include river herring and shad as stocks in the Herring Fishery Management Plan (FMP). These depleted stocks need to be managed properly, and inclusion in the FMP would allow for this to become a reality.

cc: Council, PMF (11/21)

Ecosystem Based Fisheries Management (EBFM)

The Council should also prioritize an action to begin development of an Ecosystem Based Fisheries Management (EBFM) plan. One only has to look at the issues we have encountered managing critical forage stocks such as herring (or nuisance stocks like dogfish) to see that single-species management is not effective. The reality is that the species we manage are all interconnected, and it is impossible to be successful without formally accounting for these relationships in the management process. Furthermore, EBFM would allow for consideration of such important factors as ocean temperature and water quality in the management process, factors that have begun to concern fishermen in recent years.

Moreover, there is a tremendous amount of momentum nationwide to bring about EBFM—like it or not, it is coming. Therefore, the Council needs to get out ahead of the process and ensure it has a hand in how it is developed. There are some in the fishing industry that are concerned with what EBFM will look like when it is completed, and so they believe the best thing is to ignore it. We believe it makes far more sense to be involved in the process from the outset to ensure it is done right.

Thanks for your time,

Steve Weiner, Chair

SBRM PRIORITIES

From: Ellen and David Goethel [<mailto:egoethel@comcast.net>]

To: Karen Roy
Cc: Ellen Goethel
Subject: letter for council priority discussion

Dear council,

I am urging you to include in priorities an end to end review of the observer program. There are numerous issues to be addressed starting with declining budgets and a need to prioritize coverage where it is needed.

The current program is geared towards precision not accuracy. This has to change. If you have limited dollars you have to deploy your people on the boats that catch the fish. Let me provide an example. During July and August the assumed haddock discard rate for midwater trawlers on George were 50 and 58 tons respectively. The level of coverage was 6 trips out of 44 and 9 out of 47 trips. Contrast this with the area one whiting fishery where I was contacted 19 times in 15 days. My actual discard rate for all regulated species was 10 to 20 lbs. per trip, for an average cost of between 50 and 95 dollars per pound of regulated species based on the cost of observers and overhead. This is driven by the cv as I made about 40 trips, roughly equal to the entire large boat herring fleet. One group is catching massive amounts of fish with tons of discards, the other small amounts of fish with negligible amounts of discards. The information derived from this scenario maybe precise, but is PRECISELY WRONG.

Fast forward to November where I have been assigned an observer every single day in November. I am fishing for bait skates trying not to catch groundfish because of the exorbitant cost of leased fish but that is a topic for another email. Again based on the trip reports received back so far the taxpayer is on the hook for about 80 to 90 dollars a pound for regulatory discards. Meanwhile the 10 % of the boats that catch 90% of the fish have relatively low levels of coverage both because of the cv and because most observers hate going on trip boats and are actively seeking out day boats. As you can see from this example this program needs a complete end to end review. In a letter I received from Dr. Karp March 8, 2013 a review of the program was supposed to be done this fall. As of the last council meeting nothing was proposed.

Rather than give you a laundry list of items that need to be addressed now, I would urge you to start an omnibus amendment to examine costs, precision, accuracy and how much coverage is actually needed to achieve objectives. In the mean time I will be analyzing all my observed trips to figure out the cost per pound of regulated species discarded to provide to you and congressional funders so we can determine if, as a group, we want to spend this kind of money to achieve these results.

In the meantime I would urge you not to vote for the SBRM amendment which contains to 30%cv.

Thanks for your consideration,

David Goethel

RED CRAB PRIORITIES

Email received September 3, 2013

-----Original Message-----

From: Jon Williams [<mailto:jwilliams@atlanticredcrab.com>]

Sent: Tuesday, September 03, 2013 3:19 PM

To: Tom Nies

Subject: deep sea red crab

Dear Mr. Nies,

With the upcoming Executive Committee meeting this fall, I would like to request that the red crab fishery be put on the priorities list for 2014 in order to potentially set an ABC for female red crab. A brief look at the history of the fishery reveals that the prohibition of females does not have significant biological merit regarding the red crab stock. In fact, it was not biologists who imposed the male-only approach-rather; it was the industry itself that requested the council to only allow a male ABC. With a new demand in the marketplace for female red crab, we now urge the council to reassess the ABC of female red crabs which currently is set at zero.

The origins of the female probation emerged during the implementation of the FMP in 2001. During this time, there were two groups that stood deeply divided regarding the future of the fishery. On the one hand, a number of historic participants followed the recommendation of the 1973 stock assessment and supported a 5.8 million lb. TAC. On the other hand, a second group argued that the '73 assessment was flawed and that resource could support a TAC in excess of 20 million lbs. As we could not predict the decision of the council, we lobbied for a prohibition on females as a safeguard in the event the council recommended the higher TAC.

In the end, however, the council both adopted the 5.8 million lb. TAC and banned the retention of female crabs. While this imposed a significant limitation to the fishery, it was not a pressing issue at the time as there was no significant market for female crabs.

Yet much has changed since the implementation of the male-only ABC. A second stock assessment conducted by Dr. Rick Wahle in 2003 found that the female biomass was 260% greater than that of males and in recent years we have had more and more opportunities to sell female crab into the Asian market.

In 2009, in response to red crab being placed on the data poor list, the council voted to set the ABC of male red crab at 3.95 million. While poor market conditions beginning in 2007 resulted in landings less than the ABC, this still was a significant setback to the fishery's future potential.

With such promising current conditions and a red crab stock that is more stable than ever, it is apparent that now is the time to reassess the prohibition on female crabs. The ban on females was only ever put in place due to unstable times within the fishery and a lack of demand in the marketplace. In addition, I would like to emphasize the ease at which this change could take place. With the implementation of Amendment 3 in September of 2011, the current language in the red crab FMP holds an ABC of females at zero rather than "retention prohibited." This should allow the council and the SSC to change the ABC to a number greater than zero without a great deal of work.

Thank you for your consideration and feel free to contact me with any questions, I look forward to hearing back from you.

Best regards,

Jon Williams

additional scallop landings accruing to these vessels as a result of the SDE of 3.9 to 5.1 million lbs in 2010.

About 2.9 million lbs of these additional landings for the SDE vessels come from Access Area trips. Under a fixed total landing amount from Access Area fishing, and without the SDE upgrades, these 2.9 million lbs would in principle be allocated to the full-time fleet. Table 4 estimates the effective "transfer" of Access Area allocation from the full time (mainly two-dredge) fleet to the SDE fleet as a result of SDE upgrades. This assumes total landings from Access Area trips fixed at 23.7 million lbs, and part-time vessels receiving 40% and occasional vessels receiving 8.33% of the Access Area allocation given to a full-time permit.

| | FT | FT SDE | PT 2D | PT SDE | Occ 2D |
|-----------------------------|-------------|-----------|-----------|-----------|---------|
| With SDE upgrades | | | | | |
| Permits | 261* | 54 | | 35 | |
| Access Area trips/permit | 4 | 4 | | 2 | |
| Allocation per permit (lbs) | 72,000 | 72,000 | | 14,400 | |
| Trip limit (lbs) | 18,000 | 18,000 | | 14,400 | |
| Fleet landings/year (lbs) | 18,792,000 | 3,888,000 | | 1,008,000 | |
| Without SDE upgrades | | | | | |
| Permits | 261* | | 54 | | 35 |
| Access Area trips/permit | 4 | | 2 | | 1 |
| Allocation per permit (lbs) | 82,966 | | 33,186 | | 6,911 |
| Trip limit (lbs) | 20,741 | | 16,593 | | 6,911 |
| Fleet landings/year (lbs) | 21,654,054 | | 1,792,060 | | 241,887 |
| Gain (loss) from SDE | | | | | |
| Fleet (lbs/year) | (2,862,054) | 2,095,940 | | 766,113 | |
| Per vessel (lbs/year) | (10,966) | 38,814 | | 21,889 | |

*NOTE: FT fleet includes 250 full-time two-dredge vessels and 11 net boats.

Table 4: Estimated effective transfer of Access Area allocation from full-time (FT) fleet to part-time (PT) and occasional (Occ) vessels that upgrade under the SDE. This assumes a constant annual total landing from Access Area trips of 23,688,000 lbs, and that part-time vessels receive 40% and occasional vessels 8.33%, respectively, of the full-time vessel Access Area allocation.

Summary: If total annual landings from Open and Access Area trips are held constant, based on data from 2008 and 2009, the estimated effective transfer of allocation from full-time permits to part-time and occasional boats operating under SDE is between 14,900 and 19,500 lbs/year for each full-time permit. Under the assumptions described in Table 4, about 11,000 lbs/year of this transfer (50 to 75% of the total) comes from Access Area landings.

Dr. Christopher M. Moore, Executive Director
Mid-Atlantic Fishery Management Council
800 North State Street
Dover, DE 19901

Dear Tom and Chris:

Since our July 30, 2013, letter to Tom, the agency working group on observer funding has been working to resolve the legal issues related to proposed observer cost sharing measures. We concluded that these issues required further discussion among NMFS, NOAA General Counsel, and Department of Commerce staff and that our lack of internal resolution of these issues prevented the joint observer funding plan development team and fishery management action team (Joint PDT/FMAT) from advancing their efforts. We now have a plan as to how to incorporate industry-funded observer coverage into fishery management plans (FMPs), which we will present at your upcoming September and October meetings; the plan is summarized below. Our plan would not specify fishery-by-fishery provisions for industry coverage programs, but would allow the Councils to use industry funding to increase observer coverage levels in their fisheries.

There are two components to the costs of observer coverage, and funding must be available for both components in order to achieve desired observer coverage levels. These components are:

- 1) Observer monitoring costs, which include the costs that would be incurred by an observer service provider, such as observer salary and travel; and
- 2) NMFS support and infrastructure costs, which include observer training, data processing, and infrastructure.

Under existing law, NMFS and industry cannot share responsibility for observer monitoring costs in the regulations. For example, we cannot cap the industry contribution and require NMFS to be responsible for the remainder of observer monitoring costs, such as the \$325 per day cap on industry contribution that was proposed in the recent Atlantic herring and Atlantic mackerel amendments. Also, any increases to observer coverage, even when industry is paying the full costs for the observers, will result in NMFS incurring additional support and infrastructure costs. Because NMFS's appropriations to cover support and infrastructure costs are limited and variable, the Councils cannot mandate specific levels of observer coverage that could impose financial obligations beyond what is appropriated.

The only way to increase observer coverage levels above levels set to cover legal mandates or the standardized bycatch reporting methodology (SBRM) is for industry to be responsible for 100 percent of observer monitoring costs, and for the Council to recommend coverage targets

cc: Council (9/23), PMF

rather than mandating specific coverage levels. We believe the best way to provide the Councils the tools to use industry funding of increased observer coverage is through an omnibus amendment for all New England and Mid-Atlantic fishery management plans (FMPs). As we have done with SBRM, we have asked our staffs to take the technical lead on developing this amendment if the Councils choose to proceed. The omnibus amendment would:

- 1) Define both NMFS and industry cost responsibilities for observer coverage consistent with the allocations noted above;
- 2) Create industry-funding requirements, similar to those currently in place in the Northeast multispecies and the Atlantic sea scallop FMPs, that can be referenced by any FMP that needs to implement industry funding requirements; and
- 3) Establish an annual process in which NMFS and both Councils would prioritize observer coverage levels above SBRM that will inform NMFS's decisions on the allocation of available NMFS support and infrastructure funds to achieve regional coverage goals, consistent with considering efficiency in the utilization of resources and minimizing costs as required by National Standards 5 and 7.

We intend to keep this action focused exclusively on the observer issue to avoid lengthy development that could result from the addition of other issues and management measures. Council input and meetings remain critical to ensure the public is involved, so we recommend leaving the Joint PDT/FMAT intact, with expanded membership to include experts from other FMPs.

We acknowledge that the observer monitoring costs can be a significant burden for industry. That is why we have identified a potential mechanism that may enable NMFS, when funding is available, to help offset some of industry's costs. This model was used to fund NE multispecies Sector dockside monitoring coverage in 2010 and 2011.

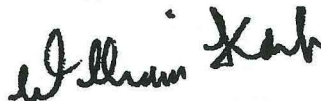

In order for these concepts to work, we need support from both Councils. This proposed approach would require both Councils to be willing to work together to prioritize regional monitoring goals. The Councils must remember that available funds limit the amount of observer coverage for all of our fisheries, regardless of the source of funding. The Councils must not prescribe specific observer coverage levels or specific industry contribution levels in future Council actions.

There are many details of this plan that still need to be resolved, but if both Councils agree with this approach, our staff will begin to develop alternatives for the omnibus amendment. Our goal is to present both Councils with an initial range of alternatives at their January and February 2014 meetings.

Sincerely,

John K. Bullard
